# Planning for Holistic Foundational Development: session transcript (Part 1)

Dr Emma Cross | Curriculum as a Compass, Module 2 | Wednesday 4 November 2026

*This transcript was generated automatically by Microsoft Teams. It may contain errors, especially for names, Indonesian words and overlapping speech. Participants' names have been replaced with "Participant" and names spoken in the text with "[name]". Nothing else has been edited.*

**[0:04:58] Participant:** Yeah. Where, [name]?

**[0:05:49] Participant:** Tell him. Bangor, Delasco.

**[0:05:55] Participant:** Laptop headset.

**[0:06:07] Participant:** Okay, yeah, like HUM.

**[0:06:10] Participant:** Okay, thank you, Bua.

**[0:06:15] Participant:** OK. One thing.

**[0:21:49] Participant:** It's good. in

**[0:25:41] Emma Cross:** Hi everyone, I'm hoping you can hear me right now, but I was just hoping also that you can see the slides, if somebody's able to please let me know.

**[0:25:50] Participant:** Yes, I can see you.

**[0:25:50] Participant:** Yeah, I can see it.

**[0:25:53] Emma Cross:** Amazing, thank you. I'm just going to stop sharing them now and I'll let you continue with your peaceful time.

**[0:25:59] Participant:** Okay, thank you.

**[0:40:57] Emma Cross:** Hi, everyone.

**[0:41:02] Participant:** Hello.

**[0:41:02] Participant:** Hi.

**[0:41:03] Participant:** Hello!

**[0:41:05] Participant:** Is Emma.

**[0:41:05] Emma Cross:** How are we all?

**[0:41:06] Participant:** Yeah.

**[0:41:07] Participant:** Hello, Miss Emma.

**[0:41:08] Participant:** Very good.

**[0:41:08] Participant:** Fine, very well.

**[0:41:12] Emma Cross:** Are we feeling tired from yesterday or are we okay?

**[0:41:16] Participant:** Completely okay.

**[0:41:17] Participant:** I'll be tired.

**[0:41:18] Participant:** OK, it's OK.

**[0:41:19] Participant:** Sorry, but OK.

**[0:41:20] Participant:** Yeah.

**[0:41:22] Participant:** Yeah, but we are excited.

**[0:41:22] Emma Cross:** Good.

**[0:41:23] Participant:** Always have been.

**[0:41:25] Participant:** We have enough rest.

**[0:41:26] Emma Cross:** Yeah. That's what matters. Because I know it's obviously a lot to, you know, be working your brain for three hours straight and then another day following on. So please do let me know if you need us to slow down or speed up or we can work completely at your pace today.

**[0:41:49] Participant:** Okay, thank you.

**[0:41:49] Participant:** OK, miss.

**[0:41:50] Participant:** Yes, thank you.

**[0:41:52] Emma Cross:** I am also aware that we are two minutes prior to the start time, so I won't get started until 2 o'clock. But I'm happy if you want to have a chat or if you're happy just waiting, I don't mind.

**[0:42:10] Participant:** I will be happy if we can chat a little bit before the module starts.

**[0:42:18] Emma Cross:** Absolutely, yeah.

**[0:42:18] Participant:** Yay. But I'm really curious how old are you? I'm sorry if this is not appropriate, but you look so young.

**[0:42:29] Emma Cross:** Oh, thank you. Yeah, I am 30. Yeah.

**[0:42:31] Participant:** HUM. My God.

**[0:42:37] Participant:** Oh my god, very young.

**[0:42:40] Participant:** Yeah.

**[0:42:40] Emma Cross:** Thank you. I don't feel young; I have two young children at home, so I'm not feeling very young right now.

**[0:42:49] Participant:** HUM. But maybe we are much older than you.

**[0:42:54] Emma Cross:** HUM. ED.

**[0:42:58] Participant:** But you look really pretty.

**[0:43:01] Emma Cross:** Oh, thank you, as to all of you.

**[0:43:05] Participant:** I.

**[0:43:09] Emma Cross:** Um, well, we might get...

**[0:43:10] Participant:** If talking about ace.

**[0:43:13] Emma Cross:** Sorry?

**[0:43:14] Participant:** Yeah, if talking about SBM, I am the oldest more than 50.

**[0:43:21] Emma Cross:** That's not old at all.

**[0:43:24] Participant:** You look all, you look young, younger, Emma.

**[0:43:24] Participant:** I'm younger. Yeah, because because of the computer setting

**[0:43:35] Participant:** Because of philtre.

**[0:43:36] Participant:** May I know how to set the computer to make to make we look younger?

**[0:43:37] Participant:** AI.

**[0:43:38] Participant:** Philtres.

**[0:43:40] Participant:** Builders.

**[0:43:41] Participant:** ED.

**[0:43:43] Participant:** HUM.

**[0:43:43] Participant:** Miss Emelda, you look younger because your philtres, maybe.

**[0:43:47] Emma Cross:** HUM.

**[0:43:47] Participant:** Yeah, very.

**[0:43:50] Participant:** HUM.

**[0:43:51] Emma Cross:** Yeah, maybe don't ask my colleagues because I think they're a little bit older than 50.

**[0:43:53] Participant:** HUM.

**[0:43:58] Emma Cross:** All right, we're going to get started for today's session. So thank you all so much for coming along again. Like I said, I know that having done the three hours with Professor Murcia yesterday, you probably need a bit of a brain break. But here we are again today.

**[0:43:59] Participant:** HUM.

**[0:44:16] Emma Cross:** I had a quick chat with Karen last night to find out a little bit more about how the session went and a little bit about your background and where you've come from. But I would love to hear from all of you, maybe just really quickly your name and where you're working and what your role is. So I'm going to go from my screen. I'll say your names, and I'm really sorry if I pronounce it incorrectly. Please do correct me. So next to me is Afrida.

**[0:45:04] Participant:** Every day.

**[0:45:05] Participant:** Yes, hello, you miss?

**[0:45:06] Emma Cross:** There we go.

**[0:45:08] Participant:** Yeah, I'm confused.

**[0:45:13] Emma Cross:** So, Afrida, where are you working at the moment and what is your role?

**[0:45:14] Participant:** Chen. HUM. I'm sorry, any help me?

**[0:45:29] Emma Cross:** That's OK. Are you a teacher? Are you a principal?

**[0:45:30] Participant:** Vitanya Guruja.

**[0:45:34] Participant:** I am a principal.

**[0:45:34] Participant:** What? Okay.

**[0:45:37] Emma Cross:** Okay.

**[0:45:39] Participant:** No.

**[0:45:40] Participant:** Yes.

**[0:45:41] Emma Cross:** Rima.

**[0:45:45] Participant:** Yes, Emma.

**[0:45:48] Emma Cross:** Is that how you say your name, Emma?

**[0:45:50] Participant:** Rima, yes, that's correct.

**[0:45:52] Participant:** Open.

**[0:45:52] Emma Cross:** Yeah, and what are you? What is your role?

**[0:45:56] Participant:** Ha ha.

**[0:45:56] Participant:** I am a principal.

**[0:46:00] Emma Cross:** Okay, wonderful. And [name]?

**[0:46:01] Participant:** Yeah.

**[0:46:03] Participant:** OK. Did you?

**[0:46:09] Participant:** I'm very sorry. My name is Fori, but my laptop was just cracked yesterday, I mean last night. So I use my brother device. So that's why the name is [name]. Yeah, my name is Fori.

**[0:46:23] Emma Cross:** Okay, no problem. Okay, no problem. At least you knew I was talking to you.

**[0:46:29] Participant:** I'm a teacher. Thank you.

**[0:46:30] Emma Cross:** Okay. Wonderful.

**[0:46:32] Participant:** I'm in Samarina.

**[0:46:34] Emma Cross:** OK, thank you. Ariza, Ariza.

**[0:46:35] Participant:** Yeah.

**[0:46:41] Participant:** Yes, hello, means Emma.

**[0:46:44] Emma Cross:** Hello.

**[0:46:44] Participant:** I am Ariza, I am from Central Java and I am head principal and also I am a teacher. I'm very busy now.

**[0:46:50] Emma Cross:** Okay. Okay. Yeah, I can imagine.

**[0:46:56] Participant:** Yes, thank you, Emma.

**[0:46:59] Emma Cross:** Next to you on my screen is Mila or Melissa.

**[0:47:05] Participant:** Yeah, Melissa.

**[0:47:06] Emma Cross:** Melissa.

**[0:47:07] Participant:** Hi, Emma. I'm a school principal in Karanayar, Central Java.

**[0:47:15] Participant:** HUM.

**[0:47:17] Emma Cross:** Hey, wonderful. Thank you, Emma.

**[0:47:18] Participant:** The.

**[0:47:18] Participant:** HUM.

**[0:47:22] Participant:** HUM.

**[0:47:23] Participant:** Ohh, hi. I'm from West Sumatra; I'm a principal of early childhood education.

**[0:47:32] Emma Cross:** OK, wonderful. Thank you, [name], [name].

**[0:47:40] Participant:** Yes, Mr. Emma, I am [name]. I am a kindergarten teacher for K1 in Bintaro, South [name].

[0:47:50] Emma Cross: Okay. Okay, wonderful. Thank you. City.

[0:47:58] Participant: Thank you, Miss Emma. My name is. I am from East Java. I am a principal on group. I think so. Thank you, Mister Miss Emma.

[0:48:01] Participant: Yes. HUM.

[0:48:07] Participant: I mean.

[0:48:08] Emma Cross: Okay. Thank you. Murcia.

[0:48:15] Participant: Hello.

[0:48:17] Participant: Yeah.

[0:48:17] Emma Cross: Hello.

[0:48:17] Participant: HUM. I am, I currently work as principal in Playgroup. Thank you.

[0:48:24] Emma Cross: Okay. Fauzia.

[0:48:31] Participant: Hi, Emma. If someday you go to Indonesia in West Java, you can go to my hometown, Garut. It's called Swiss Pan Java. So it's quiet cold here. I'm currently I'm a principal in a kindergarten. Thank you.

[0:48:41] Emma Cross: Mhm. Beautiful. Okay. Wonderful. Thank you.

[0:48:54] Participant: Okay, hello, Miss Emma. I am Karthika. I am head principal from VK Amila at Depot West Java near to [name]. And nice to meet you and join this group.

[0:48:57] Emma Cross: Lang. Beautiful. And you? HUM. I see. Oh, actually, that person has just moved. I can see now it's Jane. Hi, Jane. [name].

[0:49:22] Participant: Hello, Miss Emma. I'm Fatiha Rashida. I'm originally from East Java, but I'm here in Buol Central Sulawsi, which is in rural Indonesia in the small village.

[0:49:38] Emma Cross: Okay.

[0:49:40] Participant: From Indonesia, I'm a teacher and also... an operator or other because here is a very need someone that can using computer.

[0:49:51] Emma Cross: Okay. Okay.

[0:50:02] Participant: Thank you.

[0:50:03] Emma Cross: Thank you. Is it Evie?

[0:50:11] Participant: Yes, Melissa.

[0:50:12] Participant: David, David, yeah, Dev.

[0:50:14] Participant: Deeping. Dev or AP?

[0:50:16] Emma Cross: Yeah.

[0:50:18] Participant: I am Dev. You can call me Dev. I am a principal at Central Kalimantan, Indonesia.

[0:50:26] Emma Cross: Wonderful. Thank you. And is there an ED as well?

[0:50:32] Participant: Yes, okay, I am Aoife.

[0:50:34] Emma Cross: Hello.

[0:50:35] Participant: Hello. Okay, let me introduce myself. I am Evie. I am from Turban, East Java. I teach in Tekatunas Akung. I am class B teacher.

[0:50:50] Emma Cross: Okay, wonderful. Thank you. And AC. Lisa. [name].

[0:51:02] Participant: Hello, Emma. I'm from the Ministry of Education Indonesia.

[0:51:03] Emma Cross: Emma. Okay, wonderful. Thank you. I'm so sorry, some of the people on my screen are jumping around, so hopefully I don't miss anyone. If I don't get to you, please do let me know. Julian? Try [name].

[0:51:32] Participant: I. It does, yeah. Look, can you tell?

[0:51:37] Participant: Hello, Emma. I am Arun. I am one of the facilitators of this programme. I am also a headmaster in the kindergarten in Yogyakarta.

[0:51:38] Emma Cross: Hello. Okay, wonderful. Thank you.

[0:51:50] Participant: Okay, you're welcome.

[0:51:52] Emma Cross: Is there Annie or Annie?

[0:51:59] Participant: Yes, I miss.

[0:51:59] Participant: Hi, Emma, ohh, I miss.

[0:52:00] Emma Cross: HUM.

[0:52:05] Participant: You, Annie.

[0:52:10] Emma Cross: Sorry, but.

[0:52:10] Participant: Yeah, I am a headmaster of kindergarten like that.

[0:52:16] Emma Cross: Wonderful, thank you. I think we have two Annies potentially. Is there? Oh my goodness, everyone's moving around. Annie Powati. Ali Puati.

[0:52:36] Participant: I have asked Emma, if you, it's me. I'm Annie [name] from Banu, Indonesia. I'm a headmaster of kindergarten.

[0:52:37] Emma Cross: I... Thank you, Annie. We do have another Annie in here, but Annie, your microphone doesn't seem to be working. So maybe if you pop in the chat where you're working and what your role is. If I haven't got to you yet, everybody is dancing around my screen. Do you mind popping your hand up for me, please, if we haven't heard from you yet? Hafitza.

[0:53:19] Participant: Yeah, hello, Emma. I'm from Samarang in Central Java. I'm a teacher in K1.

[0:53:22] Emma Cross: Hello. Wonderful, thank you. And [name]?

[0:53:38] Participant: Okay, hello Emma. My name is [name]. I'm a teacher in Bongi, Indonesia.

[0:53:48] Emma Cross: Wonderful, thank you. Sonja.

[0:53:54] Participant: Hello, Miss Emma.

[0:53:57] Emma Cross: Hello!

[0:53:58] Participant: My name is Suryanisi. I am play group teacher from East Java. Thank you.

[0:54:05] Emma Cross: Wonderful. Thank you, Surya. [name].

[0:54:11] Participant: Hello, Emma. Nice to meet you. My name is Parasi. I am a principal in Kindergarten in Kunong, [name]. Thank you.

[0:54:13] Emma Cross: Hello.

[0:54:19] Participant: Gemma.

[0:54:22] Emma Cross: Wonderful. Thank you, Jimmy.

**[0:54:30] Participant:** Hello, Emma.

**[0:54:33] Emma Cross:** Hello. HUM. Maybe let's go to, is it City, Amber?

**[0:54:47] Participant:** Hello, Ma.

**[0:54:49] Emma Cross:** Hello!

**[0:54:50] Participant:** Yes, there are two participants in this group who have first name city, but you can call me Anmar and I'm a teacher in East Java. Nice to meet you.

**[0:54:55] Emma Cross:** Yeah. HUM. Thank you. Lovely to meet you too. Is there anybody who hasn't had a chance to share who they are and where they're from yet?

**[0:55:12] Participant:** I...

**[0:55:12] Emma Cross:** Okay. Oh, yeah.

**[0:55:14] Participant:** Hello!

**[0:55:16] Participant:** Hi, Emma.

**[0:55:18] Emma Cross:** Hello!

**[0:55:20] Participant:** Hello. I'm Lydia [name]. I'm from [name]. I am a teacher at preschool, but also a principal. Nice to meet you.

**[0:55:33] Emma Cross:** Lovely to meet you too. Thank you. Is it Dewey?

**[0:55:36] Participant:** Hello. Hello.

**[0:55:38] Participant:** Okay.

**[0:55:38] Participant:** Hello, Emma.

**[0:55:40] Emma Cross:** Hello.

**[0:55:41] Participant:** Excuse me, okay. I'm sorry, my name is [name]. My camera is [name].

**[0:55:41] Participant:** Okay.

**[0:55:47] Emma Cross:** That's OK.

**[0:55:48] Participant:** My feature is not, not. I, I can see my my face, maybe my camera is error. I want to try to try I want to left first.

**[0:56:02] Emma Cross:** Okay, no problem. Do we?

**[0:56:06] Participant:** Hello, hello, Miss Emma.

**[0:56:07] Participant:** Okay, thank you. Hi, Emma.

**[0:56:10] Participant:** Hi, Emma, can you listen to my voice?

**[0:56:10] Participant:** HUM.

**[0:56:10] Emma Cross:** Hi, Jimmy.

**[0:56:13] Participant:** HUM.

**[0:56:14] Emma Cross:** Oops, sorry, is that me speaking?

**[0:56:15] Participant:** Songs for me.

**[0:56:18] Participant:** Yes, I am. Hello, Miss Emma.

**[0:56:22] Emma Cross:** Hello!

**[0:56:23] Participant:** Nice to meet you. I want to introduce my name is Alfira Ponto. I am from Nado, North Sulawesi. I am is a teacher for kindergarten. Nice to see you, Miss Emma. Thank you so much.

**[0:56:25] Emma Cross:** [name]. Yeah. Thank you. And Jewy.

**[0:56:43] Participant:** Okay, thank you. Can you listen to my voice, Emma?

**[0:56:47] Emma Cross:** I can, I can hear you, yes.

**[0:56:49] Participant:** The first, I'm sorry because my English is not good. It's not fluent. I'm so sorry, but okay. Introduce, my name is David Augustini because I have another Dev. You can call me Adi. I'm from Sumbala.

**[0:56:55] Emma Cross:** That's OK. Okay. Okay.

**[0:57:10] Participant:** You know Lombok?

**[0:57:12] Emma Cross:** Yes.

**[0:57:13] Participant:** Yes, a small island after Lombok Island. Same up, yes. And I'm a rural teacher, but I work to, I work in non-formal education.

**[0:57:19] Emma Cross:** Okay, wonderful.

**[0:57:33] Participant:** We have to surface education, so I assignment coordinator for daycare, so coordinator similar like headmaster, so I have minister and I'm.

**[0:57:33] Emma Cross:** OK. Okay. HUM.

**[0:57:52] Participant:** Teacher to my student age one years old to four years old.

**[0:57:54] Emma Cross:** Wow, very busy. Okay.

**[0:58:03] Participant:** Okay, thank you, Emma.

**[0:58:04] Emma Cross:** Wonderful. Thank you. Is it knee?

**[0:58:15] Participant:** Hello, Miss Emma.

**[0:58:17] Emma Cross:** Hello, how are you?

**[0:58:18] Participant:** Can you hear me? Yes. I'm going to introduce for myself. My name is Nikade Giuliani. I'm from Bali. I am headmaster in the kindergarten. Nice to meet you.

**[0:58:20] Emma Cross:** I can hear you yet. Okay. Lovely to meet you. Thank you, Eviani.

**[0:58:37] Participant:** Hello, Miss Emma. Nice to meet you. You are so beautiful. OK, my name is Evian. I'm from Banyuwangi. I am a teacher. Nice to meet you.

**[0:58:39] Emma Cross:** Hello.

**[0:58:41] Participant:** Play.

**[0:58:44] Emma Cross:** Thank you.

**[0:58:47] Participant:** When is the Gandhi Munro backs for FM? Nice to meet you. Thank you, thank you, and Jimmy.

**[0:58:52] Emma Cross:** OK, wonderful. Thank you, and you, and Jimmy.

**[0:59:01] Participant:** Sorry, because I was a bad.

**[0:59:02] Participant:** I said that I was.

**[0:59:06] Participant:** So.

**[0:59:06] Participant:** No.

**[0:59:09] Participant:** Did you hear my voice?

**[0:59:10] Participant:** Can you hear my voice?

**[0:59:12] Emma Cross:** I can, there's an echo but I can hear you.

**[0:59:13] Participant:** I can, there's an extra over that I can.

**[0:59:15] Participant:** Hello, Emma. Nice to meet you.

**[0:59:16] Participant:** Help me.

**[0:59:20] Participant:** My name is I am an educator and also.

**[0:59:20] Emma Cross:** And he.

**[0:59:21] Participant:** Thank you.

**[0:59:27] Participant:** Ohh. Oh.

**[0:59:31] Emma Cross:** Oh, sorry, just a second. Got some background noise there. Sorry, Jimmy, would you manage to say that again, please?

**[0:59:31] Participant:** HUM.

**[0:59:40] Participant:** Did you hear me?

**[0:59:41] Emma Cross:** I can now, yes.

**[0:59:44] Participant:** Hello, Emma. My name is Jimmy. I am an educator and the school principal in Balipapan at Kalimantan Province in Indonesia.

**[0:59:56] Emma Cross:** Wonderful. Thank you, Julian.

**[1:00:03] Participant:** Hello, Miss Emma. My name is Liliana. I'm from Java in permanent residency. I'm a kindergarten teacher.

**[1:00:16] Emma Cross:** Wonderful.

**[1:00:16] Participant:** And my expression is.

**[1:00:22] Emma Cross:** Okay. Thank you, Julian.

**[1:00:24] Participant:** Thank you, Miss Emma.

**[1:00:25] Emma Cross:** HUM. Has everybody had a chance to share where they're from now?

**[1:00:33] Participant:** Uh, you haven't called me yet, Emma. Hi.

**[1:00:37] Emma Cross:** Hello, Andy.

**[1:00:38] Participant:** Yes, thank you, Emma. Right, we have a similar nickname. Your name is Emma and my name is Amy. Yes, it's a similar. It's a similar nickname. OK, I'm a teacher and also a principal too. I have I come from Swat Sulawesi.

**[1:00:46] Emma Cross:** Oh, wow. Okay, wonderful. Thank you. And further, further.

**[1:00:57] Participant:** Thank you.

**[1:01:01] Participant:** Yes, yes, my name is Filda Alvia Nasari. I'm a kindergarten teacher from Magalang Central Java. Nice to meet you, Miss Emma.

**[1:01:10] Emma Cross:** Lovely to meet you. Thank you. Okay, hopefully that is everyone. If we haven't had a chance to get to you, please pop in the chat who you are and what your role is. So you may have guessed because you've shown up today and I'm sure you already knew from the

programme who was speaking. I am Dr. Emma Cross and I'm currently the course coordinator here at Curtin University for the Bachelor of Early Childhood Education and I lead our research cluster for early childhood education as well. My research at the moment focuses on the impact of digital technologies in childhood. I work really closely with Professor Murcia. And I also research leadership competencies in early childhood education and care services. And by the sounds of things, most of you, if not all of you, or arguably all of you, are leaders in your schools and in your services as well. So that is something that I'm very passionate about is supporting our leaders to continue enhancing and growing their skills so we can continue building and promoting the skills of those around us as well. A bit of my background, so I actually studied A Bachelor of Commerce, so business in management and marketing, and then I did my Masters of Teaching early childhood, and at that time I was actually running early childhood education and care centres. So what you might refer to as a daycare or a childcare. The children that I worked with were from birth until five years of age. And yeah, I worked as a teacher as well as running the centre. So I'm sure It's quite similar to what you're all doing, juggling that leadership and teaching responsibilities. So today we are, let me share my slides with you. We are obviously talking about planning for holistic foundational development. Can everybody see those slides as well before I keep going?

**[1:03:27] Participant:** Yes, we can see your slide. Yes, we can see.

**[1:03:28] Participant:** Yes, of course. Okay.

**[1:03:29] Participant:** Yes, we can see it.

**[1:03:30] Emma Cross:** Wonderful. Thank you. All right. And as you all know as well, these five modules will build from each other. So the idea is that where we start in module one, we slowly build off of that and we go from curriculum being the living document all the way down to strengthening how we implement that into our practise and in our programmes. We are in module 2 today. Like I said, I am very aware that you had a big day yesterday. So please let me know if you need me to slow down or explain anything again, particularly because I only speak English and all of you amazing women speak multiple languages. So I'm very happy to slow down and support you however you need. Before we did move into today's topic, though, I wanted to know what one of the key takeaways was for you from yesterday's module with Professor Murcia. What was something that really stood out to you and made you reflect on your practise? Feel free to raise your hand and maybe we'll hear from two people. and if you don't, if we don't get to you, feel free to drop it in the chat as well. Johanna, please.

**[1:04:49] Participant:** Okay, thank you for the time. My name is [name] Emma. I'm from Central Java. For the yesterday meeting from the professor said about the curriculum as a compass, which means that the curriculum

**[1:05:07] Emma Cross:** Yeah.

**[1:05:10] Participant:** is gives the direction without prescribing every step. And then here we also talk about how the curriculum here to support and to direct also the assistant that the teacher provide to help the children to develop.

**[1:05:28] Emma Cross:** The.

**[1:05:29] Participant:** their characteristic.

**[1:05:32] Emma Cross:** Yeah, absolutely.

**[1:05:32] Participant:** Yes, and also, yeah, okay, thank you.

**[1:05:34] Emma Cross:** Thank you. No, please continue. That's okay. HUM.

**[1:05:52] Participant:** That we, as a teacher, also, we as a teacher should combine the mindful, meaningful, and joyful learning in the our study for the children. Means that, like mindful in Indonesia, is it means that learning with awareness, attention, and curiosity, which means that the student...

**[1:05:52] Emma Cross:** HUM Yeah.

**[1:06:12] Participant:** has the awareness, attention and curiosity for the study that we send to them. And then the study should be meaningful, which means that the children understand not only what they are learning and that day, but also why it matters and how they can use the study in the real life and also about the joyful. It means that we create the study in the joyful learning, which means creating an environment where the children feel safe, happy, and they feel motivated and

**[1:06:35] Emma Cross:** HUM.

**[1:06:51] Participant:** also excited with our study or our learning through play-based learning.

**[1:06:58] Emma Cross:** Definitely. Thank you, [name]. Katika.

**[1:06:59] Participant:** Something like that. Yeah, real HUM.

**[1:07:03] Participant:** Yeah, thank you for this opportunity. From Professor Mercy, I get that curriculum is a living. It means curriculum is not a draught, but is living like a children. We have to know what the need, what the children needs. So the teacher have to make a

**[1:07:13] Emma Cross:** HUM.

**[1:07:21] Participant:** of service and test before they make a plan for them. Then just one activity, we can develop the children with the competition. Thank you.

**[1:07:26] Emma Cross:** HUM. Definitely. And I think also something that I have always found really important is, well, when I first started teaching and I was very inexperienced, I would create a lesson plan and I would feel like I had to stick to it and do exactly what I had put on that piece of paper. But the reality is that the questions the children were asking and the things they were becoming curious about, it took us in a different direction. And if I had have been really, really strict with that lesson and the activity that I had planned, so much really beautiful learning and quality experience would have been lost. So I think as well, it's really important that we're flexible in the way that we're delivering our teaching and our practise as well. And Fawzi, I've just read your message as well and yes, responsiveness is definitely an art and that's exactly what I've just explained as well. And it does take practise because there's the element of noticing that happens first. So noticing the children being curious what they're interested in and then being curious yourself about where that will take you next. And that's where we're looking today at planning for holistic foundational development. So I know that you have all had some online learning as well through our website and I wanted to know what you have taken away from those four areas. So the whole child, interconnected development, curriculum as direction and meaningful experiences. We're going to try something a little bit Oops, different today. So please bear with me. If this doesn't work, we can try something else. I've just turned on a setting that will allow you to hopefully type on the slide. So have a look, see if you can find the option to... Get a text box and drop on there what you think under each of these headings. Oh, I can see everybody in there. That's really exciting. If you can't figure it out and you're really

excited to tell me something, please feel free also to pop your microphone on and we can chat while others are typing and doing what they want to do. And also, of course, you can pop your ideas in the chat, too. How is everyone going? Have you found the... The option to have text boxes.

**[1:10:45] Participant:** Yes, Mattes.

**[1:10:56] Emma Cross:** While we're all looking at that, something, Fawzia, you've said as well is that you can't always predict what the children would discover and the questions they will ask. And I think that's really, really valuable and important as well. And that curiosity, like I said, is really important for driving the direction of our pedagogy and the ways that we're teaching the children. and working with them, I mean, we learn alongside the children as well. I've just seen here under whole child, someone has shared that what they've learned about that is when we can see a child is developing not in just one area and that is definitely the case. And another thing as well is children don't just develop in one space at a time. You know, if you think about as adults, for example, if we were to go outside and play a game of soccer, there would be a lot happening all at once, not just the learning to kick the ball, there would also be the conversation and the talking to our peers. and all of that language development, as well as the thinking and planning about, you know, where am I going to kick to get the ball into the goals. So there's a lot of development that happens all at the same time. So it's difficult to say the only thing that, you know, a child is learning when they're playing soccer is leg strength and how they can kick a ball. There's a lot of learning that happens All at the same time, so it's really difficult to say we can only focus on certain things at a time; it's more important that we look at the whole child. And I can see somebody has literally written exactly that on the slide, so thank you. And, as well, yes, children have different interests and different ways of learning. and the interconnected development, we've got some ideas getting in there about how all of the parts are connected and how a child feels affects how they learn. Absolutely. and under meaningful experiences, I think it is. We've got some ideas coming in as well. Definitely. One thing I want to get everybody thinking about now as well, because we will look at this as we move through today's module, but what is it that makes an experience meaningful to that child?

**[1:14:51] Participant:** Okay, can I, Emma?

**[1:14:54] Emma Cross:** Sorry, who is talking to me? I can't.

**[1:14:57] Participant:** It's me, Amy, the similar nickname with you.

**[1:14:59] Emma Cross:** HUM. Yes, yes. Hello, how are you?

**[1:15:04] Participant:** Experience meaningful to the child. We see when they playing, the experience and then the conversation, they singing and then they drawing. It's all experience for children and we can prediction what happened next.

**[1:15:22] Emma Cross:** Mhm.

**[1:15:22] Participant:** It's the Experience, we can prediction what what step after that and then what happened after they playing that activity.

**[1:15:31] Emma Cross:** Yeah, absolutely. And I think also what's going to be meaningful to me might be very different to what's meaningful to you in that experience. So my needs, my interests might be different. If we're looking at a whole class of children, there might be similarities amongst them.

**[1:15:32] Participant:** Yes.

**[1:15:51] Emma Cross:** that we can draw from to have smaller group experiences or larger group experiences. But what is really meaningful to each child might look different. And it's important that we understand the different meaning that children gain from these so that we can plan appropriately to enhance their learning and their interest and engagement in learning too. ED. I might leave that there. I'm so sorry if anyone is midway through typing on the slide. I can see in the chat we've got that the whole child can learn an interconnected development as our curriculum direction with meaningful experiences, yes. Language develops through relationships. Physical experience can involve thinking and problem solving. Definitely. Children have different interests. Yes, they do. And these areas are interconnected and developed together through meaningful play exploration and real life experiences. Absolutely.

**[1:16:43] Participant:** In real life experiences, absolutely.

**[1:16:46] Emma Cross:** Okay, I'm going to get these annotations. Pause for a minute. Now, I tested this the other day with my husband and I learned that as I turn annotation on on the subsequent slides, your text will come back up. So when we get to that point, you'll need to remove the things that you've written so that we've got a clean slate to start again. But thank you, thank you for joining in on that. Oops, yeah. That. Okay, so based on everything that you learned, I mean, there was quite a lot in that online content and we've already had a quick look at those four different areas. What was one thing in particular that really stood out for you? Feel free to drop it in the chat and again, I'm going to ask the first two people to put their hands up. So If you want to raise your hand through Teams and I'll... See who we've got. Otherwise, feel free to yell at me. That's fine, too. Imelda, please.

**[1:18:03] Participant:** Yeah, thank you, Miss Emma. The thing that I know from online work that I do last night till this morning is about seeing the world child. We can look at a child through 5.

**[1:18:20] Emma Cross:** Mm.

**[1:18:22] Participant:** Five lens. five lenses. They have asked a thing about development. They are not separate curriculum subject. There are five lessons, 5 lens, like physical, social, emotional, language and

**[1:18:40] Emma Cross:** Mhm.

**[1:18:44] Participant:** thought, thinking and creative or cognitive, and value and character.

**[1:18:51] Emma Cross:** HUM.

**[1:18:52] Participant:** That I know from online, what?

**[1:18:53] Emma Cross:** HUM. Thank you, Imelda. I can see we've had a few people pop up their hands. I'm just going to get to one more, and that will be Murcia.

**[1:18:56] Participant:** Thank you, Amelda. I can see we've had a few people pop up their hands. I'm just going to get to one more and that will be Murcia.

**[1:19:09] Participant:** Okay, I think what I got from the online work is the point that we don't need to observe all the four aspects when observing the children's, because when they do the work, the four aspects, all the other aspects doesn't need to show up at the same time. Therefore, Because in my experience, we tend to find out and sometimes we are too focused to observe the four aspects and from the online world, I know that, oh, it doesn't need to have, we, the aspect doesn't need to show

at that time only. so we can also observe at the next meetings, at the next meetings, and then combine them into one conclusion. Thank you.

**[1:20:01] Emma Cross:** Definitely. Thank you. And something that I often notice with my student teachers here at the university, when they're learning to plan and observe learning with young children, they feel as though they need to, when they're assessing, they need to explain how the child has achieved. basically every different subject area all through the one experience. And while there might be ways in which different areas of curriculum are being addressed through that experience and the children and students are demonstrating that achievement, they may not be the focus in that session and that's totally fine, okay, as well. So, you know, if, for example, that soccer experience, there will be language development that's taking place, there will be problem solving, there will be a whole range of different skills that are developing at the same time, but the focus of your assessment still might be on those gross motor skills and their ability to kick a ball and how they do that. So while there may be hundreds of different things that a child is achieving through the one experience, it is okay to narrow your focus as you're observing the child as well, because it can be really difficult if you're trying to see everything at once, to actually see anything. Whereas if you're narrowing your lens a little bit and focusing on what you're seeing and seeing what's the most dominant outcome in that experience, it is okay to say, you know, these two, three areas might be the most apparent in this experience, but that there are others that are happening as well. And you might even say, you know, for example, the children were using negotiation skills, but it wasn't as apparent as I would have liked, you might then follow up with another experience where you bring that into the forefront of that experience. So thank you. Now, if I can drive my slides. So today we are moving from seeing, so seeing that learning taking place, seeing what children are interested in, to planning deliberately for it. So we're going to be looking at that today. So one thing that I want us to start thinking about before we move forward is what makes an experience meaningful for young children. And I've already started to touch on this, that the meaning for children may be different between one another and different between groups or small groups or whatever it might be. But what do you feel it is that makes an experience meaningful? Have a think about that. I might give you, let's spend 5 minutes here and have a think, maybe write a sentence for me if you can, and then drop it in the chat and we'll have a look. I'll just pick out a couple as we're going. So what is it that you feel makes an experience meaningful for children? And I can see actually, Julie, you've been really ahead here and you've already written that in the chat, so thank you so much for that. I will come back to that once we've had some time. Okay, it looks like we've had a lot of chat come through. So if you haven't finished yet, that's okay. I'm going to come back to Dewey having been the first one. So you've said meaningful learning means providing learning experiences that are connected to children's daily lives, interests and experiences. In early childhood education, children learn best when they can play, Try new things, ask questions and discover things by themselves, and I think that is all very true. I especially like the point there about children discovering things themselves, and I think when we talk about play here in Australia, we have sort of defined it in... three ways that we can play. So you have educator-led or teacher-led play and that looks like when we are directing a learning experience and we are really initiating that play for the children and leading that play. Then we have the next tier down which is educator or teacher guided play. And when we look at that guided play, it might be that the teacher is sort of on the fringe of the play that's happening and the children are negotiating that experience. They're exploring things themselves. But as they're getting to different points, the teacher is then stepping in and asking

questions and directing the children. to continue exploring and learning in a different way. Then we obviously also have the complete child-led independent play. And that is when the children are playing completely by themselves and the teacher might be sitting back and observing what's happening and identifying the learning that's independently taking place. So yeah, here in Australia, we have three types of play that we look at. We predominantly sit in that, well, when we're doing intentional pedagogies and intentional teaching, we mostly sit in that teacher-led and teacher-guided play. I personally prefer sitting in that guided play because that provides the flexibility to... encourage the children to be curious and then for the teacher to respond and navigate that learning experience and that's where this whole curriculum becomes living. If we're sat only in that teacher-directed play, there's not much flexibility for us to explore what the children are interested in and where their learning is moving.

**[1:28:38] Participant:** No.

**[1:28:45] Emma Cross:** I saw a comment in the chat here that I actually want to come to and it was, are you, I think, so it says a truly memorable educational experience at our school took place when the students took a direct trip to a local traditional market.

**[1:28:51] Participant:** ED.

**[1:29:04] Emma Cross:** There the children got hands-on experience buying fresh vegetables, counting their money and interacting directly with the market vendors. Firstly, I feel like this is an incredible opportunity and experience for these children. I think I personally would have loved that, but I think there also would have been a lot of really quality learning that took place through that experience in a range of different ways. But my question here is, that sounds like an amazing learning experience, but what do you feel it was that made that meaningful to the children? Not sure where RU has gone in my screen. I have 3 pages of all of your faces. Say. I fear I may have lost her. Well, I understand that. Most of you wouldn't have had this experience. Does anyone want to share what they think might have been meaningful to the children in that experience?

**[1:30:17] Participant:** Sims.

**[1:30:18] Emma Cross:** Johanna?

**[1:30:21] Participant:** Okay, thank you, Emma. About the IU experiences, it happened into my school also. So it happened like a month ago. We have the topic about the financial

**[1:30:29] Emma Cross:** Okay.

**[1:30:40] Participant:** about the financial. So the kid learned about the use of the money. And then we as a teacher, especially me, I am teaching for the toddler toddler, which mean in two to three years and

**[1:30:42] Emma Cross:** Mhm. HUM.

**[1:31:00] Participant:** this is the very first time for them to know about the use of money itself. And then I teach them about the use of money, like for saving, giving and also buying. And then I told them that

**[1:31:14] Emma Cross:** Mhm.

**[1:31:18] Participant:** We use the money, it's not like freely. We use it like...

**[1:31:23] Participant:** No.

**[1:31:25] Participant:** We use it like for buying something that you need, not for like sometimes kids know that money is using for buying like toys or like chocolate or like snacks, something like that. But we use this money for buying

**[1:31:31] Emma Cross:** HUM. HUM.

**[1:31:44] Participant:** something to give to people. And then, yeah, I and then before, we also have the, what's that, the plan to go to the supermarket. It's not a traditional market, but we go to the supermarket to buy like vegetable apples and fruits.

**[1:31:48] Emma Cross:** Mhm. Mhm.

**[1:32:05] Participant:** to do the what's that we have like in English. I forgot about the in English, but this is the day when we come into the activity that we have to make a like a mountain full of food. a full of food and it has like a vegetables and fruit something like that. And yeah, I explained to all my teachers that we want to celebrate this day. This is like we are celebrating.

**[1:32:30] Emma Cross:** Yes, yeah.

**[1:32:43] Participant:** We are pleased. We have a place to all people who can afford this fruit and these vegetables to us. So we will use our money to buy fruit and vegetables, but I still give them the free.

**[1:32:50] Participant:** HUM.

**[1:32:52] Emma Cross:** HUM.

**[1:32:56] Participant:** HUM.

**[1:33:03] Participant:** I give my student a freedom to buy what vegetables and what fruit they want to do. But before we go to the supermarket, I make the, what's that, the play, like a play, how do we go to the, what's that, the supermarket?

**[1:33:21] Emma Cross:** Yeah.

**[1:33:22] Participant:** Go, we do the play in the class first. I set up the class as a mall. I bought the toys of, what's that, fruits, vegetables, and also I have the machine of a gas here, something like that. Yeah, and yeah, we go as you, as the buyer, we have a...

**[1:33:30] Emma Cross:** HUM. Yep.

**[1:33:46] Participant:** buyer, we have a, what was that, a cashier here and yeah, now we are playing before we go to the supermarket, we are playing how do we go into the supermarket, how do we give this money to the cashier and yeah, they feel like, because yeah,

**[1:33:57] Emma Cross:** Thank you.

**[1:34:06] Participant:** again, toddler and then they feel so excited back then. They feel so excited, they know about how do they use the money and then they know about the, what's that, the thing that they have to buy or not to buy and later when they know about the...

**[1:34:11] Emma Cross:** Yeah. Mhm.

**[1:34:26] Participant:** Rules, how do we? to in the supermarket and then next week, sorry, in the next day, I and all the students come to the supermarket and yeah, they know that they know what they want to buy. So yeah, I give the rules. It's not the rules. I just give them like

**[1:34:43] Participant:** Send ex wedding.

**[1:34:45] Emma Cross:** Yeah.

**[1:34:50] Participant:** We want just want to buy a fruit and vegetables. Can we buy another another part like snacks or like chocolate? And they can say no. They only say no. They say no and then some of them can say.

**[1:34:58] Participant:** Bing.

**[1:35:02] Emma Cross:** HUM.

**[1:35:11] Participant:** I just, I just want to buy vegetables in Indonesia. Yeah, they know the rules about how they use the money wisely. And then, yeah, in their experience, in their real life here, they both the fruits, only fruits and the fruits and the vegetables only and later when they have both the vegetables and the fruit, they come, they go back, went back again to school and then

**[1:35:34] Emma Cross:** HUM.

**[1:35:48] Participant:** Yeah, I thought I talked to them about how do they feel, how did they feel when they go to supermarket? How do how did they feel when they give the money to the cashier and they say, yeah, I'm happy. I'm happy to. I'm happy I can buy some.

**[1:36:05] Emma Cross:** Yeah. Yeah.

**[1:36:17] Participant:** toddler, they play something with their parents. They do not know how they use the money itself. They just know about, I just want snack. I just want this one. But here they can experience by themselves. They can experience how they use the money wisely.

**[1:36:24] Emma Cross:** Yeah.

**[1:36:35] Participant:** Flop it.

**[1:36:37] Participant:** a letter. I told them also when they have the cashback from the money itself.

**[1:36:39] Participant:** See.

**[1:36:48] Participant:** I said, what the money do you want to do with the cashback itself?

**[1:36:54] Emma Cross:** HUM.

**[1:36:55] Participant:** Some of them said, I want to play another fruits, I want to play another vegetables, and sometimes some of them also said, I want to play chocolate, but I get them again. I guide them, like, the money that you have, the cashback that you have here, you can save for yourself. Because I explained about them, like, three years, what about the three years of the money itself, like buying, saving and keeping.

**[1:37:22] Emma Cross:** HUM.

**[1:37:28] Participant:** HUM.

**[1:37:32] Participant:** I say, if you have a cash, if you have a cash back, you can save the money into a bank or what's that? Like, we can say Celangan or in Indonesia, in English, I forgot in English, I'm sorry. And then, yeah, I deliver it. I guide them, I deliver it the use of the money.

**[1:37:33] Emma Cross:** HUM. That's OK.

**[1:37:55] Participant:** by giving them a story. From the story, they know the experience of the use of money and then from the experience that they play in the class. And then also in the real experience, they go to the supermarket, they know about the use of the money wisely. They can

**[1:38:13] Emma Cross:** HUM.

**[1:38:16] Participant:** by what they want to do, what they want to buy for the next project, like make a foot mountain, something like that, to celebrate the Haribangan city and there itself. So those the meaningful experience for my students, especially for toddlers.

**[1:38:24] Emma Cross:** HUM. HUM. Yeah, well, thank you for sharing. And I think I've seen Dewey and Ferda post in the chat as well, and I think they've both really identified again, like building on what you're saying about what makes that really meaningful. And it's because the children are learning by doing. They're learning by being involved in their community and by

**[1:38:37] Participant:** Something like that, you.

**[1:38:59] Emma Cross:** having a go at real world adult tasks, like going to the grocery store and learning about healthy eating and money awareness. Thank you so much for sharing, you, Hannah. And we'll get just one more here. Rima, I can see you're next in line.

**[1:39:16] Participant:** Yes, Emma. HUM.

**[1:39:20] Emma Cross:** Emma, what is it that you feel makes this meaningful?

**[1:39:23] Participant:** Yeah, if I'm not mistaken, I remember the Montessori has a theory about the stage of development, right? And I really... Concern which one of one of Montessori theory is the age of four until five. There is a operational stage, which means that in that age.

**[1:39:58] Emma Cross:** Mhm.

**[1:40:02] Participant:** Kids learn by using their five cents. I think this is one of the meaningful means, because when they use their five cents, like, yeah, I have one student.

**[1:40:07] Emma Cross:** HUM.

**[1:40:22] Participant:** He is a speech delay. He doesn't, he always avoid, he always reject food. You know, he can eat something, can be eat, can be. Bit, OK, and I try it to start with, I bring a banana. So he can feel it, he can touch it, he can peel it. They can taste it. HUM. And I try it for almost 5 days. day first until the day, the day three, he still reject, he still avoid the bananas. But when I give to him again and again, and then on the 5th day, on the 5th day, he can try. Even if it's a little bit bitten, he just ate a little. I think that's... You know, yeah, I think that's an experience that makes he can try to eat the bananas. I think from the experience,

**[1:42:05] Emma Cross:** HUM.

**[1:42:11] Participant:** Sims. That's one of the meaningful experience, I think, yes.

**[1:42:18] Emma Cross:** Mm. Definitely. And sometimes I think particularly when we're looking at young children and particularly with very young children or children that maybe have sensory aversions, it sounds like potentially this child might have some sensory aversion, being involved in the process, for example, of the banana can be incredibly valuable as well, not just the child's learning, but their development too. So when we're thinking about an experience like this one, you know, that child might really benefit from going to the supermarket, choosing the banana, you know, helping to purchase the banana, bringing it back to school, and then helping to prepare that. And while the child might not be prepared to try the banana that day, The amount of learning and the bravery that they have shown by touching this food or whatever it might be that they typically are a little afraid of or not interested in tasting or touching, that's huge because that child has then taken some, I suppose, responsibility and direction and leadership in that as well. So thank you. That's definitely a really meaningful opportunity for that child. We're going to keep going now. So I'm so

sorry. I can see lots of people with their hands up and I feel like everyone has such amazing things to share. I actually thought coming into these three hours would be a lot of time, but I'm actually starting to feel like maybe 3 hours is not enough time for us to all share our wonderful experiences and to talk really deeply. And I can see in the chat, there's some really wonderful things going in there. So please keep posting because I am reading and I am seeing them as well. So when we look at your curriculum, there are obviously the three different pillars of curriculum. There's the mindful, meaningful and joyful experiences. And I know I can't remember quite who at the moment, but we have already raised what these areas look like. in early childhood. So when we're talking about mindful, meaningful and joyful experiences, we're looking at how children show agency. So again, in that banana experience, for example, a child being able to choose a banana at a grocery store, bring it back, decide how they want to prepare that. Do they want to peel it? Do they want to use a knife and cut it? That agency really gives them a sense of ownership and belonging in their learning, which really helps to engage them in that. And again, there's that awareness and engagement there. When we look at meaningful, I feel like you are all really understanding this. I can see that from our conversations and also what's coming through in the chat as well. is that meaningful learning is, it is related to their experience and it's related to their context as well. So it's something that the child really resonates with, that they understand, that they feel purposely or purposefully driven to, and it's learning that is tailored to that child and their interests. whilst also recognising, it says in there the context and obviously that is quite a broad thing. But for example, what might be a meaningful learning experience to a child in an Australian classroom would look quite different to a child in an Indonesian classroom because you have different cultural contexts, backgrounds, family situations, lots of different things that will. slightly change what a meaningful experience looks like to that child. And then of course, there's joyful and I think if we can't bring the joy to education, we've already lost the children and we really want these children to be set up as lifelong learners where they want to learn, they want to be curious and continue learning through school. And I think that that joy is really what sparks that for a lot of children. So those are experiences obviously that are positive and engaging, but also challenging because if things don't have challenge, there's not a lot of incentive to try new things and to be daring. And that also a lot of growth comes from that. Two. Now, I know that Professor Murcia introduced this cycle of planning to you yesterday. It is the way that we are directed to plan and the whole cycle of planning and how we deliver our teaching to children. This is something that We are basically governed by here in Australia. We have our national quality framework, which is a document that essentially states what best practise teaching looks like. And we are actually, as teachers and centres and schools, we are assessed against how well we do these sorts of things. So, this underpins a lot of what we do in early childhood education here in Australia. So there are multiple levels there. So of course you have the observe. That's where we're watching the children. We're identifying what they know, what they can do, perhaps what their weaknesses might be, different areas for growth and development. It could be identifying their interests. It could be something as simple as observing who their friends are. Who do they feel comfortable learning with? Who do they, who are they more outgoing with? So you could then tailor your groups and decide who, which children you're going to put together for their learning experience to really encourage them to explore the learning further because they're more confident. So those are all the sorts of things you want to be looking at in that observe phase. Then you have assess. So when we're looking at assess, that doesn't necessarily mean they're doing a worksheet or a test or anything like that. Assess and the way that we assess here in Australia is a lot of observation. So we have different

types of observation, particularly when we're looking in that birth to five year old space where we observe the children, we watch what they're doing and then we say, okay, I've seen the child do this. What does that mean? How are they meeting different curriculum outcomes? What learning are they demonstrating? What development are they demonstrating? and potentially what are they missing? So that's how we really look at assessment here. There are of course, particularly in school-based environments, more formal types of assessment with, you know, tests and things like that. But we typically don't do that in early childhood unless it's a standardised test that the government will put out to get a baseline across all of the children. But typically, that's not how we would assess here in Australia. Like I said, it's based on observation usually. So yeah, you watch the children, see what they're doing, and then what does that mean? So I guess that's the real difference there is what are they doing and what does that mean? Once we have that understanding of what they're doing, what that means, and the different areas that their strengths might be, their weaknesses, or potentially areas you want to focus on, that's where we look at the planning. So for example, if I go back to my soccer example, I've observed a soccer game with a group of children at lunchtime. It wasn't a planned experience. I'm just sitting there having my coffee and watching the children play. But I've seen them playing and negotiating this experience. But I also saw that there were, say, three children who couldn't kick the ball, that they couldn't balance on one foot, that they were not able to participate in that physical activity because their skills weren't. such that would enable them to. So I have watched this experience. I've identified that there's a bit of an issue here with their gross motor development with, say, three children. This is just a very off the top of my head example. It's not a real example. and then I want to plan an experience. So then I might think, okay, I can see that the children are really interested in soccer. So that could be something that I use to engage them in the experience in the 1st place. But it might be that we slow it down and we start practising different skills and playing different types of games with the balls so that they can develop those gross motor skills. So that might be my plan. So I might draught up a bit of a plan for that. And then the implement is when you do the plan. So that's when I would get the children together, we practise the, I don't know, the game with the ball, whatever it might be. And then after I do that, I would evaluate, was that successful? Were the children engaged? Did they learn what I was hoping that they would learn? Were they able to start practising those skills or was it completely unsuccessful and that's okay, I'll just try something new tomorrow. But it is a cycle because even when you're in that evaluate stage, at the same time you've observed those children. So then you're going back into that observe, assess. Plan and the cycle continues going. Does that make sense to everybody?

**[1:51:26] Participant:** Yes.

**[1:51:28] Participant:** Yes, yes, yes, miss.

**[1:51:28] Participant:** Yeah.

**[1:51:28] Emma Cross:** HUM.

**[1:51:29] Participant:** Yeah.

**[1:51:30] Emma Cross:** Thank you.

**[1:51:31] Participant:** It is means.

**[1:51:31] Participant:** Yes, Miss.

**[1:51:35] Participant:** This makes sense.

**[1:51:35] Participant:** Stop.

**[1:51:35] Emma Cross:** So... We have here 6 questions that we can use to guide our thinking. And this is when we are planning a learning experience for these children. So the first question is, what do I know about these children? Secondly, what is the curriculum intention? Thirdly, what Experience or environment might make this possible? Fourth, what do I notice in here as the children engage? Five, what does this tell me about their learning? And 6, what next? So I have a bit of an example here for you, but I do want you to have a think about. what this might look like in your context as well. So if I'm looking at question one, you might have a group of children who are really interested in trucks, for example, delivery trucks, dump trucks, diggers. I think we all probably have a group of children in our schools and centres that love trucks. It's a very common interest in young children. And what I've noticed with these children and what I know about them is that they have really, really strong language skills, but that the children don't have the best mathematics skills. So their counting isn't very good. Their understanding of volume and capacity isn't great. They maybe are not good at comparing different things. So my curriculum intention then would be that I'm going to use trucks, I'm going to lean into that interest and their really strong verbal communication skills to start developing some of those mathematics skills. So you can see there we have taken what we know they're interested in, what we know they're strong and really good at, and we're using that to develop the things that they potentially are needing more support with. So then the next question is what experience or environment might make this possible? So we might take some toy trucks out to the playground or outside. and we might decide to fill the trucks with different things we find outside. We might fill them with some sand, we might fill them with rocks and leaves, we might fill them with other equipment, whatever it might be. But we would create an environment where the children can collect things in their truck. Then what I'd be looking to do is bring the children together and saying, okay, what do we have in our truck? Which truck has the most things in it? Which one holds the most? You know, if we're counting, are there five rocks in this truck and 10 rocks in that truck? So which one holds more? or it could be that one of the trucks has a mixture of leaves and rocks and sticks. So then you say, okay, well, how can we organise what's in this truck and what's similar amongst these resources? So you then might go, okay, well, we've got a group of leaves, we've got a group of rocks, and we've got a group of sticks. And in doing that, The children have been able to compare the characteristics of the resources and group them based on those characteristics. And those are all mathematics skills in early childhood. So when I'm going through this experience with the children, I might notice that the children are really engaged, they're really excited. I might hear them using some of those mathematic terms that, you know, this truck is bigger, there's more here, I have the most rocks, this one is heavy. All of those sorts of mathematics skills can be demonstrated through those language skills as well, which then gives me some insight into them understanding the skills. It might be that they actually already knew this all along, but they weren't demonstrating it because they weren't being encouraged. Or maybe it was that going through this experience, I could tell that the children knew what we were looking at, but they didn't have the words to express it. So that tells me that we need to look more at the language of mathematics. So more than, less than, heavy, light, you know, all of these things. So then what next? So I might take my understanding of the children and their mathematic competencies and continue that learning through a follow-up experience. I could also look at it and say, okay, I think they did quite well with this mathematics, but they started to become really curious about where the trucks go and what trucks do. So I might bring that into more of a social experience as a follow up. So we might read books about trucks. We might go and visit a rubbish station where we can see the rubbish

trucks collecting the rubbish and disposing of it. You know, there are so many different ways that that could go, but you follow the children's interests and you're following as well where their areas of need are. but drawing from their strengths. So I always try and use the child's strength as like the platform or the base, and then we step up to build those areas that they're potentially a little bit weaker in based on what they're really good at, because that then also supports the child to come into that experience with a really strong feeling of competency and that they're capable of doing these things and they feel confident to learn as well. So have a think about that, what that might look like in your context. I think trucks is probably a pretty standard one. I have a 2 1/2 year old boy at home at the moment and he is truck crazy. So I'm sure that that is very common and I'm sure you're experiencing that as well. What we... Oops, hang on, I've lost my... Oh, hang on. Okay. The other thing we need to look at is that planning does begin with children and the curriculum. So we obviously need to have an understanding about the children, what we know about them, but then we also need to think about how that relates to curriculum, what areas of curriculum you might want to focus on. and drawing from both of those things, looking at them together, then we think about what could we do? How, you know, could we encourage the children's learning and what might we make possible? So as you begin planning learning experiences, obviously we have those six questions that you can draw from, but these are kind of like 3 really quick questions that you can ask yourself. What do I know about the children? What is the curriculum intention and what can we do with that? So what does this mean in practise? From the Indonesian guide that I received, there were three keywords that really stood out to me. There was the understanding, the applying and reflecting. So have a think. If you would like to chat, feel free to raise your hand and again, I'll just probably get to the first two. Otherwise, feel free to pop in the message box and I'm also going to turn the slide annotation back on. So if you want to write your ideas on the slide, you can do that. And I will see if I can clear. Oh, it's all cleared anyway. Yeah, cool. If you want to jump in there and have a go at writing on the slide, you're most welcome to do that too. And while people are typing and writing, I can see Imelda, you were so quick. Do you want to share with us your thinking here?

**[1:59:05] Participant:** Okay, Miss, thank you so much. For this slide, I know that in Indonesia, in our curriculum, we call it a learning Experience. There are three steps that followed by the children understanding, applying and reflect.

**[1:59:18] Emma Cross:** Mhm.

**[1:59:28] Participant:** Thing is the it depend on the topic that we that we arrange that time, but sometime it's also we use with emergent curriculum with emergent topic if some if sometime the children. seeing something and want to know more about something and we can change it. Now we can, we, I will explain about the normally for understanding example for the topic of Of the... Coconut tree. Yeah. To understanding about the coconut tree, the teacher with the children go outside to see the touch and

**[2:00:11] Emma Cross:** Mhm.

**[2:00:27] Participant:** About the coconut tree and what and what they know and what they see about coconut tree, and sometime for understanding, we also, if we have the book story, we also... tell them, read a read aloud about that book to the kid. After that, the children sitting with us in the circle and we ask them what they know about coconut tree, what they see.

**[2:01:02] Emma Cross:** HUM.

**[2:01:02] Participant:** About that, and there are discussion about the coconut tree that time. So, when so we asked what the project we will do, what will what do you want to know more about this to to applying to for the project?

**[2:01:13] Emma Cross:** HUM.

**[2:01:21] Participant:** Do you have an idea for this project? The teacher always ask about that. Then we done, we doing the project with the children with the many idea. We prepare everything, everything, many materials. We also we use the loose part.

**[2:01:25] Emma Cross:** HUM.

**[2:01:42] Participant:** that around us, they doing their project, the teacher. Is a HUM. observe them along the project. Then the reflecting the teacher asking to ask to the to the children about what they what they made with the project, what the novel with the project, what kind of project they make. Do you have something Do you want to play this project tomorrow? Did something material that will you add or know there are happen with us for a learning experience?

**[2:02:16] Emma Cross:** HUM. HUM. Wonderful. Thank you, Imelda. Angie. Thank you.

**[2:02:39] Participant:** Okay, thank you, Miss Emma. I don't know if I can get the part to answer. Okay, this is my experience. I have a student who really like to play with the water in the water and sand area.

**[2:02:57] Emma Cross:** HUM.

**[2:02:57] Participant:** But he has a difficulty in holding something. So by understanding his interests and his difficulty, I thought that I have to make, I have to arrange a activity that

**[2:03:03] Emma Cross:** Mhm.

**[2:03:17] Participant:** Can help him to improve his sensory skill, and then I made a plan to washing the...

**[2:03:23] Emma Cross:** Mhm.

**[2:03:31] Participant:** washing the truck and then pouring the water and then squeezing the sponge to make him better at holding something. By doing that, I have reflect that he has improved his skill in holding something.

**[2:03:43] Emma Cross:** Mhm.

**[2:03:52] Participant:** Actually, this planning about understanding the student, applying and reflecting has helped me so much to help the children improve their skill. Only that to answer. Yeah. Thank you, Miss.

**[2:04:03] Emma Cross:** HUM. Yeah, wonderful. And you can, no of course, and you can hear from that experience as well that he would have had the opportunity to build the strength in his hands by doing things like squeezing, and it was based on his interests as well. Yeah, thank you.

**[2:04:20] Participant:** Yes. HUM. Yeah, yeah, you're welcome.

**[2:04:27] Emma Cross:** I can't see any text on the slide, but that's okay. I'm going to keep driving. I'm just very aware of the time. So sorry if you were midway through typing. But when we, what it might look like when we're working with young children is understanding how they encounter things how they explore and then when we're applying it, we could try different things, which we could use different materials, we could investigate different ideas. And when we reflect, we can obviously think

about how things went. We can also talk about that with colleagues, with the children themselves, we could talk about it with their families too. We could think about how we can represent that learning. So it might be that, for example, in that experience with the hand strength, we might represent the fact that the child has developed increased hand strength by maybe making some clay artwork. How can the child mould that clay with their newfound strength in their hands? And we could revisit different things as well. So one thing I have always loved using with young children to revisit their learning is photos. So taking photos as they're learning and then coming back together and showing them the photos and saying, You know, can you tell me what what you were doing here? Can you tell me? what you learned, what you did, why you did different things. And photos in particular are a really great resource because especially with young children, they sometimes forget. And showing them those photos, even for me, I forget to. Looking at those photos can remind us of what happened and we can revisit that learning and the things that took place. Lace. What we need to be mindful of though is that these aren't separate lessons. They don't happen in isolation and by themselves. It happens all together in a sequence. So children can move back and forth between these things as well. They can move back and forth from how they understand, apply and reflect on their learning. Because again, like as we're reflecting, you might think, Oh, that reminds me of the trucks, how much I love trucks. I'm going to go back and think more about that and apply different strategies. I want to try something new this time. And then the way that I understand it might be different. So the way that we move between these isn't always in a straight line. And it doesn't happen by itself and, like I said, the children can move back and forth between those. So an example here, and what I'm going to do now is I'm going to talk you through this example of an experience a little bit, because as we move towards the end of today's module, you will have a chance to have a practise at planning and experience. So the idea of this experience is how can we move water from here to there. So this photo is not a real photo, it was computer generated. But you can see the children are playing in a stream and they have different ways that they are playing and engaging. And you can see one of the children is using her hands to move the water and another child is using a leaf. But the question or the provocation to the children would be, how can we move water from the stream? to the bucket or whatever it might be that's further away. So I want you to have a think and pop in the chat. We'll do the chat this time. What do you think the children might do in this experience? So not thinking about what we're going to do. Our guidance in this is asking the question, how can we move the water? What do you think the children might do in response to that question? I can see here that Lydia and Imelda have very similar thoughts that the children might think about how they could transport the water. So whether that is with their hands or with leaves, Leah's agreed. They might say that they can use their hands. Murcia said they might try to move the water or make a big splash. I know my children would certainly make a big splash and a big mess at the same time. The children might think what kind of things that they can use to transport the water, yeah. Annie, I can see you have your hand up. Did you want to share your thinking? Annie, did you want to share?

**[2:09:53] Participant:** I want to try, share.

**[2:09:56] Emma Cross:** Yeah, surely. Thank you.

**[2:09:58] Participant:** I think at the situation, the children will say, I have my hand and they will bring water from the river to their place. And at the next time, I think they will see it. What that's it's so

turn the water and thing to get the leaf maybe, or maybe they will search any bucket or others - that's my thing.

**[2:10:32] Emma Cross:** HUM. Yeah, so you're thinking that they might try their hands first and then realise that might not be the best way and try different approaches or think about different approaches too. Thank you.

**[2:10:45] Participant:** Okay, can we miss Emma? Yes, I think the children will think about how to move the water from here to there. They are maybe using with the hands and they are real think about

**[2:10:47] Emma Cross:** Yes. Mhm.

**[2:11:04] Participant:** So... Using the object around them, maybe like a leaf or another object. I think like that means, thank you.

**[2:11:12] Emma Cross:** HUM. Thank you. Yeah, definitely. I think the children will be really curious about what it is.

**[2:11:21] Participant:** It's my miss.

**[2:11:24] Emma Cross:** Oops, sorry.

**[2:11:28] Participant:** I, uh, honey.

**[2:11:29] Emma Cross:** Yes, Annie, go.

**[2:11:31] Participant:** Yes, I think the children teaching channel, the canal canal, I think and construction and acute or gather system in Indonesia.

**[2:11:40] Emma Cross:** HUM. Okay, yep.

**[2:11:49] Participant:** and building a water well or a water scope like that maybe.

**[2:11:55] Emma Cross:** That would probably take a lot of time, but if you've got a whole day for it, there would be a lot of really rich learning that would come out of that. Yeah, absolutely. So I think what we would see the children doing is that, and of course, this is just a prediction. All we can do here is predict. The children would try different things. They would talk between themselves and say, oh, the water's falling out of your fingers. You know, we need to try something else. People might say, you know, I'm going to go and look for a bucket or a cup or I have my water bottle. We could use that. The children would probably negotiate. They would try different things. They would reflect on what's working, what's not working. But there's a lot of different things that would be potentially happening in that experience. My question to you now is what learning do you think would be happening in that experience? So thinking about maybe different areas of curriculum, different areas of development, what learning will the children be gaining through this? Evie.

**[2:13:10] Participant:** Okay, thank you. I will try to share my idea. OK, children think spontanely, spontanely, and then it will be.

**[2:13:19] Participant:** HUM. What you mean might be happening? What's Learning?

**[2:13:27] Participant:** It will be the problem solving might be the first thing from the children experience.

**[2:13:35] Emma Cross:** Yeah, definitely. They would definitely be practising those problem solving skills and those are very applicable as well. If they can problem solve this water transport issue, then

they will be able to problem solve other areas of learning as well. It's quite a transferable skill between different areas. Thank you, Evie.

**[2:13:37] Participant:** Mhm. Might be. When?

**[2:13:53] Emma Cross:** Havitza.

**[2:13:58] Participant:** Yeah. Okay, in my opinion, maybe the child will learn about the texture of the water first, because they can touch, they can feel it. The water is cold or not or Yes, also first they learn about textures and then about... Measures. If we have the two hands to get the waters from the river and the box, how many we can bring it? How many, how follow that we can measure about the volume of the voters. I think that is one of them, one of the things that the children can learn.

**[2:14:56] Emma Cross:** Definitely. And I think that's a really good point as well in terms of the texture because that also brings in the sciences then and you can look at, you know, this is a liquid and there are liquids, there are solids, there are gases. So you could also start bringing in the science into that experience as well as the measurement and how the capacity of things. So, you know, my hands can only carry a little bit, but this big bucket can carry a lot of water. Yeah, thank you. So as educators, what is it that we might do? I've got three things here to kind of guide your thinking. So noticing, what is it that the educator might notice in that experience?

**[2:15:25] Participant:** Yeah, I think good.

**[2:15:39] Emma Cross:** How might they respond to the children and how might they extend on that learning too? So what they've seen, what the children have learned, how could they then extend on that moving forward?

**[2:15:48] Participant:** Mm. Nice.

**[2:15:52] Emma Cross:** Have a think about this.

**[2:15:56] Participant:** What? Yes. Thanks, Ben. HUM. Experience.

**[2:16:12] Emma Cross:** Debbie.

**[2:16:15] Participant:** Yes, I try to answer what might the educator do, maybe about this activity. The teacher can be noticed, respond and extend. For notice, teacher observe what children are doing, what...

**[2:16:30] Emma Cross:** Mm.

**[2:16:35] Participant:** they are saying what they are interested in water and respond for respond to teacher respond by asking questions to the children, giving encouragement and providing support when children need help. And also teacher can extend

**[2:16:47] Emma Cross:** ED. Definitely.

**[2:17:15] Participant:** Yeah, thank you.

**[2:17:16] Emma Cross:** Yeah, thank you. And I think also that would be a really nice opportunity to link in with that channel building and the pipeline example. I think it was Annie that you brought that up. That would be a beautiful way to extend on the learning that you identify as well. I'll just hear from one more person here.

**[2:17:33] Participant:** Yeah.

**[2:17:35] Emma Cross:** A past name.

**[2:17:35] Participant:** Okay.

**[2:17:39] Participant:** Yes, Miss, I think, not this, the educator observe what children are doing and their interest and challenge and what children discoveries. And then the rest one, I think the educators listen to children's ideas and then

**[2:17:46] Participant:** Yeah. Yeah.

**[2:17:59] Participant:** To expand and the educator provides new talents or opportunities to deepen the children's learning.

**[2:18:01] Participant:** Yeah.

**[2:18:06] Emma Cross:** Yes, definitely. Thank you. I've just seen in the chat that, I think it's yours, has asked a question, in Australia, do you have subjects in our centre, for instance, art, maths, language, and transition, or do you always teach these skills through an intended topic? So we, it depends if we're in a, like a daycare or a school.

**[2:18:10] Participant:** The.

**[2:18:29] Emma Cross:** In both contexts, we have subject areas like art, math, science, you know, English, humanities. We have all of these different subject areas, but we generally teach them through children's areas of interest and in playful ways. So

**[2:18:35] Participant:** Yeah.

**[2:18:48] Emma Cross:** For example, when we look at art, and I think Professor Murcia mentioned yesterday that the two of us delivered quite a bit of PD or teacher training in China. And one thing that I noticed a lot of in China was that the teachers would have these beautiful pieces of art. and they would help the children to develop the same piece of art. So it might be that they did this beautiful clay piece of a dog, for example. In Australia, we tend to focus more on the skill of the art making as opposed to the product. So when we're looking at something like art, if we're coming back if we're looking at this water experience, for example, it might be that you come back to school or the centre and the children then create a painting or a collage or a drawing of what they did. And so for every child, that would look very different. But my focus in that experience wouldn't necessarily be that they can paint a beautiful picture of the lake. It would be that they, you know, talked about the colours and they practised their fine motor skills of controlling that pen. And so we tend to use an area of interest to deliver content and subject specialist. concepts, if that makes sense. So again, like when we're talking about the truck example from earlier, we can teach a lot of mathematics without having to sit down and say, we're having a maths lesson. Instead, we're playing, we're outside, we're engaging in that learning. Does that make sense, Yossi?

**[2:20:33] Participant:** Yes, thank you, Emma. And I have one more question, if you don't mind. I'm wondering about three kinds of play that you mentioned before. Can you mention about that? Can you explain more about that? Thank you.

**[2:20:37] Emma Cross:** Yeah, of course. Okay. Yes. Yeah, so there's the three types. I kind of think of it from, you've got like a range here. At one end, you have the most possible teacher engagement in that play to the least possible. So on one end, you have where a teacher is really driving that play. They're directing the experience for the children. They're saying, we are now going to use our hands and collect the water from the lake and we're going to take it to this bucket and we'll take turns and that's how we're going to play now. So that's where you would have teacher-led play. Then in the middle, it's teachers are involved, but they're not, the children are not completely by themselves. So in that experience, the teacher might stand back and see that the children are collecting the water

with their hands and the teacher might then start asking questions and they might say, I can see that the water is falling through your hands. you know, what do you think we could use that would stop that from happening? Then you might support the children to find all different resources and help them collect them and try all of them. But the children are still making choices in that play and they're still leading that, but you're guiding the way that they're going through that play by asking really careful questions. And then at the other end is where teachers are not involved in the play at all. So you stand back and you fully observe the children, unless of course there's a safety issue and then the teachers have to get involved. But that's the other end is where the child is completely leading that play experience and they're the ones directing it as well. I can see a couple of questions in the chat. What we might do is we'll keep going because we've got a break coming up and when we get into that break, I'm happy to answer these questions as well. So we'll keep going and then we'll come back to some of these questions I can see. So what we might notice in these experiences is we might see different theories, different thoughts, we might see different like theoretical in terms of theorists taking place. Like we were talking earlier about Maria Montessori, we might see some of those theories. unfolding in the learning. We also might see some of the children's theories about what might happen. So for example, they might immediately think that they can't carry the water with their hands because it will fall through their hands. They might have these theories before they even try. We might notice the children coming up with explanations. their ways of saying how and why different things are happening. We might see them trying different strategies. So again, that could be that we try our hands and we try a leaf. They might try, you know, putting sand in their hands and lining it before they collect the water, if that helps. So we'll see them having these different strategies. We will also see them being persistent and really trying and persevering when things don't go to plan. We might also see them collaborating with other children and also with us as their teachers and educators. And again, we might see them using different materials. So there's quite a lot that we could be noticing as the children are expecting. exploring their learning experiences, which then brings us to the what next. So we've observed all of this, we've seen so much rich learning taking place. So once we have those observations, we then need to analyse that. What does that mean? You know, we have seen the children using their hands and then using a leaf and then finding different resources, we might interpret that as the children having really strong problem solving skills. That might be how we understand the learning that's taken place. And because we understand that they have really strong problem solving skills, we might respond by creating another learning experience to

**[2:24:43] Participant:** What is it to do with the children?

**[2:24:49] Emma Cross:** give them further opportunities to build those problem solving skills in a different way. Or it might be that we use their problem solving skills for them to develop language skills by communicating with each other and negotiating a solution to the problem. So that's sort of what we want to think about there. We do, like I said, we have a break now. We'll take a 15 minute break.

**[2:25:10] Participant:** Sing.

**[2:25:12] Emma Cross:** And we will return at, let me pop this in the slide so that we don't forget, we'll return at 3.55pm. That's my time. I don't know what time it is where you are, but we have 15 minutes. So please feel free to stretch your legs, have a drink of water, go to the bathroom, whatever it is that you need.

**[2:25:13] Participant:** HUM. Hey, Cortana.

**[2:25:32] Emma Cross:** And like I said, I'll have a look now through the questions in the chat and I'll get through as many of them as I can in this break. Okay, so the first question I can see... is from Murcia and it says, from your experience when you do the notice, respond and extend phase, how do you manage to observe all the children at the same time? So sometimes it's simply not possible. It depends on the group size and the dynamics of the group and all of those things. Depending on the type of experience that it is, sometimes I observe the group. What is the group able to do? What do they do collaboratively? You know, you can observe the group. Or it might be that you have decided that this water experience is for my little boy who doesn't have really great hand strength. So this experience is focused on him, but I know that the other children will benefit and learn from it. So I might have a focused child that I'm focusing on more as they're going through the experience and I'm observing that child. Or it might be that I have, say, two or three focused children where I'm really focusing on them and the learning that they are gaining through the experience because We can't meaningfully plan a lesson or a learning experience that will be meaningful for every single child in our class and in our group. We're far better off having a couple of focused children, but inviting the broader group to be a part if you're happy to do it as a large group experience. And that way you know

**[2:26:55] Participant:** The. Yeah. No. HUM.

**[2:27:11] Emma Cross:** you know, my water experience is focused on the little boy who needs support with his hand strength. He's going to practise those fine motor skills and I'm going to observe how he's doing that. But I also know that there are four other children that love water play. So they're going to really benefit from this too. They'll be learning that they gain. And so you have,

**[2:27:12] Participant:** HUM. Yeah.

**[2:27:30] Emma Cross:** You can really have, yeah, focused children or larger groups. That's how I do it.

**[2:27:33] Participant:** Yeah.

**[2:27:37] Emma Cross:** HUM. Can see. Debbie says, how can teachers recognise holistic development in children who are quiet, less expressive or rarely participate in group activities? Could we be overlooking their learning simply because they do not demonstrate it in obvious ways? This is something to be reflective on, definitely. I think all children will demonstrate

**[2:27:45] Participant:** HUM. Yeah. Yeah. HUM.

**[2:28:03] Emma Cross:** to some level their learning and knowledge and understandings and all of these things, even though it might not be verbal. So it might be a matter of

**[2:28:07] Participant:** Yeah. Yeah.

**[2:28:14] Emma Cross:** this being more of a, I guess, it would depend on the child and you really need to understand the context of the child and everything for me to be able to give the best possible guidance here. But I guess for me, I would think, you know, would this be an example of a time that you encourage independent play?

**[2:28:15] Participant:** No. Yeah.

**[2:28:33] Emma Cross:** And as the teacher, you sit back and you observe. You know, I'm sitting there, I'm quiet, and I'm watching this child. What is it that they're doing? What are they interested in? Do

they really like one other child? Should I do a small group with those two children? Does this child prefer being completely on their own? You know, do I plan for that?

**[2:28:33] Participant:** Hey. Yeah. Yeah.

**[2:28:52] Emma Cross:** and then obviously, yeah, just observing them as closely as you can. It is difficult and there will always be times when learning can be overlooked. I think that's unfortunately a given when we're working with such young children because they can't always consistently demonstrate what they can do.

**[2:28:53] Participant:** The. What?

**[2:29:11] Emma Cross:** You know, I know, so for example, my son, he's 2 and a half. He can count from 1 to 20 sometimes. Some days he pretends he can only count to say 5. It just really depends on his mood and how he's feeling. But if I was only to observe him on that one day, I might think that he can only count 1 to.

**[2:29:23] Participant:** Play.

**[2:29:32] Emma Cross:** So it's important then to have multiple opportunities to revisit the child and their learning and continue observing them to get a guess more overarching idea of what it is that they can do. Hopefully that helps. It is a bit of a tricky situation that you've described.

**[2:29:33] Participant:** Yeah. What? What is? HUM. Yeah. Yeah.

**[2:29:49] Emma Cross:** Customer said, how can we identify children's interests and turn them into meaningful learning experiences, especially when there are many children in one classroom with different interests, needs and abilities? This is again when I would look at sort of more focused children. You can't always watch every child at the same time. It's not possible. So it might be that you're watching

**[2:30:01] Participant:** Wow. The.

**[2:30:09] Emma Cross:** a group of children who are playing together with the trucks or with the blocks or whatever it might be and listening to them. What is it that they're talking about? How are they negotiating? How are they leading that play? Because that will really give you some insight into their interests as well. Obviously, all the children will have different interests, needs and abilities, and that's really where

**[2:30:17] Participant:** No.

**[2:30:30] Emma Cross:** we have certain focused children, or it might be that you have ways of making the experience slightly different based on their needs. So for example, it might be that I'm aware I have children who don't have as good fine motor skills and hand control. So when we're collecting the water, I will make sure that there are buckets and spoons and other things so that they can still participate.

**[2:30:44] Participant:** Mmh.

**[2:30:54] Emma Cross:** At a level that's appropriate for them, because then their needs are quite different in that sense.

**[2:30:58] Participant:** Yeah.

**[2:31:00] Emma Cross:** Hafitz has said, in the classroom, there are children who are active and others who are less active. Some are confident and brave, while others tend to follow their friends and have

not yet shown clear interests. How can we identify and nurture the interests and needs of these children and turn them into meaningful learning topics? Again, I think that that's something that we can really identify. in smaller groups often, particularly if they have their friends that they enjoy doing things with. Sometimes their interest might just be being with their friends. It may not necessarily be a particular area. But I think again, just trying to observe them and seeing what they're interested in and

**[2:31:29] Participant:** HUM. HUM.

**[2:31:41] Emma Cross:** then planning for that accordingly.

**[2:31:44] Participant:** HUM.

**[2:31:45] Emma Cross:** Emelda's asked about worksheets. It depends on the context. I personally don't use worksheets in early childhood. I think there's a lot of really powerful learning that comes from being hands-on. Not everybody agrees. This is something that's quite contested across

**[2:31:52] Participant:** HUM. HUM.

**[2:32:04] Emma Cross:** where I live anyway, but the guidance that we have and the way that we teach our students is that the best practise is to not have worksheets. There are ways of capturing their learning that don't involve worksheets, so that's where you might have the children drawing a picture or telling a story. They might

**[2:32:06] Participant:** Yeah.

**[2:32:22] Emma Cross:** do a dramatic play where they show you how they did things by making a story and a play about it. But we typically don't use worksheets. Ellen has said, are there any limits to how much we should notice, extend and respond to children's activities? How do we know when to step in and when to let children expand? Law independently. This is very much a judgement call and you will know from your children that you work with what is best for them. I think there are definitely times when it is tricky, but we do need to sit back and that gives us the opportunity to be able to see what they can do independently.

**[2:32:58] Participant:** Yeah. Close.

**[2:33:07] Emma Cross:** Sometimes it's a choice. Sometimes it's making the decision that today I'm not going to interfere in this 10 minutes of play. You know, today I'm going to sit and I'm just watching. I used to have to sit on my hands so that I knew I wasn't participating because it can be really

**[2:33:21] Participant:** Bing. No.

**[2:33:27] Emma Cross:** tricky to not jump in immediately. And other times we might say, you know, you can, you've made the decision, you're not jumping in, but you can see that there's so much rich learning that the children are just missing. And it might be that you make the decision in that case to step in and to ask questions and to guide the children.

**[2:33:28] Participant:** No. I. No.

**[2:33:47] Emma Cross:** through that. It really just comes down to observing and seeing where it's going. HUM. What is the most effective teacher-parent partnership holistic child growth at home? How can school holistic learning be aligned with home parenting? I think it comes down to having trusting relationships with the parents. This is, yeah, this is a tricky one. It's based on the relationships that you have with the parents, that they trust you, but you also trust them as parents.

And it really is, like you said, it's that partnership. How can you work together to achieve a common goal? I think honest and open communication with the parents, that's respectful of the children. and focuses on their strengths. So whenever I communicate with a family about their child, it's very much, you know, your child can do all of these amazing things and I see really great opportunity for us to continue building on these other skills. So instead of saying, your child can't count, your child can't do this, your child can't do that, We focus on what they can do and then say this is an opportunity for them to continue learning. And I think sometimes it's the way that we phrase things that can really support that trusting relationship. We want to maintain that positivity in the way we communicate as well. And the last one I'll get to because I will take like a four minute break for myself because I will need to pop to the bathroom. Fatiha said, I was reading a book chapter by you on Springer about empowering teachers through digital planning in early childhood settings. It's jumped away. I just read the abstract because I don't have full access. It made me reflect on my own school in a remote area. How can we effectively empower our teachers to adopt these digital planning tools for holistic development without making them feel overwhelmed by the technology? It's a really good question and I think it comes by working slowly with your teams. So if we come in with big changes all at once really quickly, it can be very overwhelming. So it's important to understand where your teachers and your team are at, what they know, what they can do. what their interests are, what they're curious about, you know, are they interested in this or are they resistant? And in which case, where do we go from here? How do we slowly develop these competencies with them? It's very much walking in partnership, so supporting them on that journey together. I think as soon as it becomes You know, I'm here telling you how to integrate digital technologies. You're not going to listen to me because it's overwhelming. It's too much. It's all at once. I think going slowly and working together is usually the best way. I am just going to take a quick break and I will be back in about two minutes. Thank you. Okay, thank you everyone. Let's keep going. We have just over an hour left for the rest of this session.

**[2:39:01] Participant:** HUM.

**[2:39:03] Emma Cross:** I did flag, yes.

**[2:39:03] Participant:** Miss Emma, sorry to interrupt you. Can I can I ask the a book chapter by you from email? Because I don't have access for access in Springer. Thank you.

**[2:39:14] Emma Cross:** Jane. Yeah, yeah, definitely. I will speak to Jane and or Craig or I'll find out who the best person is here at Curtin and see if they can send it to everybody. I'm sure that would be helpful. Was that the chapter that was one of the readings in this? Module. Murcia.

**[2:39:46] Participant:** No, but I just wondering about the technique about how to empower them and this module, if there is no correlation, but I think I will learn about empowering my teacher in my

**[2:39:53] Emma Cross:** HUM. Okay.

**[2:40:05] Participant:** Uh, School. Thank you.

**[2:40:06] Emma Cross:** Okay, yeah, definitely. Yeah, I will speak to our team here at Curtin and make sure that you can all get a copy of that book chapter. Definitely. Okay, so you're most welcome. For the rest of the session, we are going to be looking at practising planning and I don't know if you have been told yet about the assessment. Do you know what your assessment task is yet?

**[2:40:18] Participant:** Thank you.

**[2:40:42] Emma Cross:** For these modules.

**[2:40:47] Participant:** And then miss.

**[2:40:49] Participant:** I just wait until Module Two.

**[2:40:50] Emma Cross:** Do you know what? Yeah, when... HUM.

**[2:40:53] Participant:** What kind of access?

**[2:40:56] Emma Cross:** Sorry.

**[2:40:57] Participant:** I already read until my month or two.

**[2:41:02] Emma Cross:** So you haven't heard what your assessment task at the end of the modules is?

**[2:41:08] Participant:** Uh...

**[2:41:09] Participant:** Not yet.

**[2:41:09] Participant:** Yes.

**[2:41:10] Participant:** Not yet, ritm.

**[2:41:12] Emma Cross:** Okay.

**[2:41:12] Participant:** Assessment, holistic, we we all. In the model.

**[2:41:17] Participant:** It's about assessment miss email, then this is in the fourth modules, if I'm not mistaken.

**[2:41:20] Participant:** Yeah.

**[2:41:24] Emma Cross:** So, my understanding, HUM, yeah.

**[2:41:26] Participant:** We have.

**[2:41:30] Emma Cross:** My understanding and I have to be honest, I'm actually currently on leave. I haven't been working at all this year. This is the only work I'm doing for the whole year is working with you in these modules or this module and the final session. So I could be mistaken, but my understanding is that

**[2:41:31] Participant:** Yeah, in the Madeleine.

**[2:41:51] Emma Cross:** You have the five modules that you do with us and then there's an assessment task at the end of the five modules that you will do. It sounds like maybe you haven't been spoken to about the module, sorry, the assessment task at the end yet. I believe. and I hope I'm not telling you the wrong thing, but I believe the final assessment task that you will do is a series of lesson plans where you're planning for children's learning. And so it brings together the five modules that we are presenting to you over the next few weeks, and then you demonstrate your knowledge and understanding of what we've spoken to you about through some lesson plans, I believe. I'm sure you will find out the specifics and more information about that as you move through these modules. But what we're going to do here is sort of a practise for you to do that and how we can holistically integrate curriculum and how curriculum can be a living a living document and a living thing because obviously you haven't done the other three modules. So I'm not worried about any of that yet. We're just going to focus on the two that you have done. This is not a test. I'm not even going to read your plans. This is just an opportunity for you to have a go and ask questions afterwards. So, that's what we're going to do for the next hour before we finish up today. So this is an example of a lesson plan here, and I have to be upfront, this isn't a very good one. So the theme is leaves. So what we're seeing here is there's literacy, mathematics, science, art, and social emotional. So for literacy, the

children will copy the word leaf, E, A, F. For mathematics, they will complete a worksheet and they will count the five leaves. For science, the teacher will just say this is a leaf and these are the different parts of a leaf. For art, all the children will make the exact same leaf collage from a model. And social emotional, the teacher will remind the children to share.

**[2:43:46] Participant:** HUM.

**[2:44:01] Emma Cross:** As they're doing this, OK, so, like I said, this is not a very good experience. What if this was you teaching this plan? What would you change? Have a think to yourselves and if you feel brave enough, feel free to share what it is that you would change about that lesson. Let me jump back so you can see it again.

**[2:44:45] Participant:** Yeah, Emma, I have my opinion about this.

**[2:44:51] Emma Cross:** Absolutely. Thank you, Katika.

**[2:44:51] Participant:** I'm not agreeing. For math for maths, children compact walks it. I'm not agree children use learning maths with walks it. I prefer children to use their. They are attaching the materials to counting.

**[2:45:12] Emma Cross:** Mhm. Yeah, absolutely. Thank you, Katika.

**[2:45:15] Participant:** Yeah, thank you.

**[2:45:22] Emma Cross:** Yes, Rima.

**[2:45:24] Participant:** Yeah, I think I choose science teacher explains the part of life. I think I disagree with this. It better if we let them to share their experience about life first.

**[2:45:45] Emma Cross:** Mhm.

**[2:45:45] Participant:** We give them time. We hear them. We have to be a good listener to them. And then after that, we can, if the children finish their explanation, then we can give them, yeah, some positive rewards and then if the explanation not really complete, we can add it to be more complete. Thank you.

**[2:46:21] Emma Cross:** Thank you, Murcia. You vanished from my screen. Oh, I can see you, but you're on mute if you were talking.

**[2:46:41] Participant:** Hello, okay, sorry. I think I would like to see from the art aspect where the children make the same collage from the model. I think instead of this kind of lesson plan, the children can explore all type of leaves, also the parts of the

**[2:46:43] Emma Cross:** That's OK.

**[2:47:02] Participant:** plants itself and maybe we can give them the topic about making your nature bodies where they can explore all type of leaves, all different size and even different shapes. And they can also arrange as they please about making the eyes and also the hands. and therefore, in that methods, I think we can also explore about their mathematics aspects too, and also their critical thinking too, in form of arts lesson planned.

**[2:47:22] Emma Cross:** Mhm. Mhm. Thank you.

**[2:47:40] Participant:** Thank you.

**[2:47:42] Emma Cross:** And we'll just hear from one more person here, Arika.

**[2:47:48] Participant:** Okay, I agree with Murcia. So I didn't agree that the art, all children make the same leave college from a model, because I think that it will be great if they're freely. to make some

art, like let them be creative with the available leaves according to their imagination, what they want to make, not just a leaves, maybe not just make a trees, maybe not just make a nature, but maybe they can make a...

**[2:48:17] Emma Cross:** ED.

**[2:48:27] Participant:** face college to make the hair from the leaves or others like that or maybe they want to make clothes from the leaves so it depends to their imaginations.

**[2:48:43] Emma Cross:** Yeah, definitely. Thank you. One thing I will say here that immediately stands out to me is that there's no holistic integration of the areas of curriculum into this experience. What I'm seeing is that the literacy is this, the maths is this, the science, the art, the social emotional. There is no crossover or thinking about how these things can be happening at once. So one thing that I would be thinking is what could I change to give the children more opportunities to do these things, to explore, to make decisions, to communicate, to investigate and to connect that learning. So we have done, I have done a bit of a changed plan here. So the original plan is there on the left in red and in the green is the redesigned experience. So we could begin with the children collecting and comparing leaves in the local environment. From doing that, they're obviously developing mathematical skills, but through the collection and the comparison, there's also language and literacy skills that are developing there. there too. We could invite their questions and their theories, provide magnifiers, drawing materials, sorting spaces and books or images as resources. So by doing things like providing the magnifiers and drawing materials, children can then also develop their literacy skills from that communication, but also the documentation of what it is that they have. Experience and they learned. Because they have those drawing materials, they also then might choose to draw a picture of the leaves and the different veins that are going through that leaf, and they might see them more clearly with the magnifier. So that magnifier component is the science, and then obviously the drawing could be the art, it could be literacy as well. Children then might decide ways to group, represent or investigate their collection and the educator would listen, introduce language or concepts responsibly and use observations to decide what they will offer next. So that's an example of how it might be more holistically integrated. So even though This is a little bit more free and child-led, or not child-led, it's educator guided. So this is, again, when we're looking at those three types of play, this is sitting right in the middle. The teacher is not completely dictating how this experience will run, but the child is not completely independent with no guidance from the teacher. The teacher is still guiding and encouraging through questioning. The the Learning and the outcomes that they are intending and hoping for. I can see Imelda, you've got a question, I think.

**[2:51:26] Participant:** Another question, when I see the... The slide before is about literacy, mathematics, and so on. You already answered it. Because for me, literacy is not only about writing, reading, and counting, but more than it. And it's Combine in one. Ben for us is not defined.

**[2:51:55] Emma Cross:** Yes. Definitely. Thank you. And Rima, I can see your hand is up as well.

**[2:51:57] Participant:** Kate.

**[2:52:04] Participant:** Talking about the holistic development, we agree that If we can add... more than one development aspect to one activity, it is the best. But we have the duration in the classroom, right? We have the time limits. The question is, how many development aspect we can design to be?

**[2:52:24] Emma Cross:** HUM.

**[2:52:35] Participant:** to be integrated in one activity. Is there any rules for maximum or yeah, something like that? Thank you.

**[2:52:44] Emma Cross:** Yeah, not really. One thing I do want to ask though is who has said that there has to be time limits in the classroom? I mean, obviously you have, you've got to, the children are only there for so long and then they have to have breaks and things like that. But when you say that, what I'm imagining is you've got 25 minutes for a literacy lesson. You have 20 minutes for mathematics that day. Is that what you're meaning?

**[2:53:17] Participant:** Yeah, yeah.

**[2:53:17] Emma Cross:** Ramia, just. Okay, because my question then is, who has said that those time limits need to exist?

**[2:53:32] Participant:** Pardon me?

**[2:53:34] Emma Cross:** So, because your question is about working within the time limits that you have in the classroom, but do we, I guess my question is, do we have to have those time limits? You know, do we have to have 20 minutes for literacy, 20 minutes for mathematics, or could we say we have an hour for exploration? You know, in that hour, we're going to talk about literacy and numeracy. There will be opportunities for art. There will be all of those same things will be targeted in a holistic way, but it will take longer. You're right. But do we have to break that period of time into those increments, or could you blend them together and have a bigger period of time for more of a project. Does that make sense?

**[2:54:18] Participant:** Yeah, yeah.

**[2:54:21] Emma Cross:** That's something I would consider is do you have to have the time broken up in those small increments or could you say I have an hour and a half between the children arriving in the morning and then them having morning tea or recess or whatever it is, I'm going to spend that time doing this leaf plan and then through that, the children will still get their opportunities for literacy. They will still have the opportunities for numeracy. But I haven't had to say we have a 20 minute numeracy lesson, a 20 minute literacy lesson, and literacy and numeracy can only be gained in that time. That's what I would think about. I would start reflecting about the ways that the class is running and the opportunities to make those small changes, even if it's that you just have an hour in the morning for more kind of exploration and project, because it sounds like this could be a different way of teaching and approach to that in your context. So it could be that it starts off just in, you know, 45 minutes an hour in a day and the rest of the day is still scheduled in the way that you have been and see what happens. That's part of, that's the beauty of being a teacher is that opportunity to try new things and reflect. And if it doesn't work, what are we doing next time?

**[2:55:39] Participant:** Thank you.

**[2:55:39] Emma Cross:** No, you're very welcome. We've got another question. I'm so sorry, I can't remember your name, but I can see that it's [name]. I know you're not [name].

**[2:55:48] Participant:** Yeah, it's story. It's story. Thank you very much. Actually, I want to ask about the one that you just explained before. It's related to the remarks question. Actually, I don't really understand.

**[2:55:50] Emma Cross:** Sorry. Yeah. Okay.

**[2:56:09] Participant:** How can we, how can we know? I mean, like, based on what I, my understanding, the one that you already explained before, it was like, okay, for one whole day, for example, we want to teach the children about belief.

**[2:56:26] Emma Cross:** Yeah.

**[2:56:27] Participant:** And the plan is about to leave. So, Rima's question is also my question. Yeah. In the school, we set the schedule, right? So, like, for one day, maybe we can have science.

**[2:56:42] Emma Cross:** HUM.

**[2:56:50] Participant:** literacy met and want to explore, explore it. I want to children explore it, but we have the limitation itself because we know that the children also don't have enough, I mean, like long time to focus.

**[2:56:53] Emma Cross:** Mhm. HUM. HUM.

**[2:57:10] Participant:** And how can we, how can we invite, I mean, decide to, like you said before, we put for 45 minutes, maybe in the beginning of the day for them to explore and then

**[2:57:28] Emma Cross:** Mhm.

**[2:57:31] Participant:** on the other and then after that we can continue to Do the schedule as usual. How can that be? How can, how can possible? Can you please?

**[2:57:43] Emma Cross:** HUM. Yeah, I think. HUM.

**[2:57:48] Participant:** Thank you.

**[2:57:50] Emma Cross:** I guess, in, in... I would be hoping that you would get to a point that one day the whole day would look like this, would be more exploration, holistic learning. You might still have very teacher-directed and intentional times for that teaching. That's really, really important too, but it can still be done. with holistic integration of other areas and still in a child-led and interest-based way. So I would hope that you get to a point where your whole day is quite holistic. But what I'm suggesting is that particularly when we make changes in our environments, lots of people don't like change. So when we're trying to support our teachers to change the way that they because it's not just the way that they're doing things, it's the way they think about it as well. And until we have tried it and until we have witnessed it and seen that the children can still learn maths, they can still learn literacy, we can be very reluctant and say, that's not going to work. The children just won't learn like that. And so that's why I'm suggesting potentially starting slowly. starting with, say, 45 minutes at the start of the day so that they can see that they can still teach, they can still integrate the curriculum more holistically, but it's slowly so that they don't feel like there's no opportunity for them to still teach the children. But I would hope that you'd get to the point where, yeah, you would have this as your way of teaching across the whole day. So then you wouldn't have those incremented times moving forward. What I would say though is that you still do want to make sure that the children are developing literacy skills and math skills and, you know, art and all of those other things. So it might just be that. You know, for the leaves, for example, I might say the children really need to work on their literacy skills. My focus for today is their storytelling, their ability to remember the things that they've done in the past, communicate that effectively. It might be something like that, but storytelling would be my focus. So it could be that I support the children to create a play where they pretend to be trees and their leaves are falling from the trees and talking about, you know, whatever it might be. But even though they've had the opportunity to explore and be curious and ask

questions, there's still a very strong literacy theme in that. experience. But when we're looking holistically, there would still be the opportunity for them to develop those social and emotional skills. There would still be the opportunity for them to develop the numeracy skills as they say, how many leaves do we need on my tree? They might still have that art experience because for me to be the tree, I now need to go and paint some leaves and some paper so I can stick them to my hands and I can be the tree. So there's still all of those areas that are happening, but my focus is still that literacy there. Does that make sense? I guess what I'm saying is, yeah, you'd hope to get to the point where your whole day is kind of integrated and holistically focused, but when you're starting out, I wouldn't be putting the pressure on yourselves and those around you. I would go slowly and be kind to yourselves and just think what is working and what is not working and how do we go forward from here. Does that make sense?

**[3:01:19] Participant:** Yeah, trying. I'm trying to, yeah. to elaborate it for myself first and then if I'm not fully understandable, I will get back to you. Thank you.

**[3:01:27] Emma Cross:** Yeah. Thank you. A Lisa.

**[3:01:38] Participant:** Yes, okay, thank you, Emma. I want to ask you some questions. When children are working on projects, I sometimes find it challenging to assess their learning while also supporting and guiding them. Should I prepare checklists on assess children during the activity

**[3:01:52] Emma Cross:** Mhm. Mhm.

**[3:02:01] Participant:** Or is it better to observe and take notes first, then complete the assessment after the listen? Because I want to make sure that I can capture their learning process without interrupting their exploration. Can you help me, Emma, because I'm very challenged to assess.

**[3:02:17] Emma Cross:** HUM.

**[3:02:20] Participant:** Well, they are doing project. Thank you.

**[3:02:24] Emma Cross:** Yeah, definitely. I think firstly, checklisting is one way to assess their learning. So you could do a checklist. There's absolutely nothing wrong with that. Or you could do exactly what you've described and take some notes while you're in that experience with them and then go away and write the observation. after. It might also be that you think, no, I want to be fully present with these children. So you actually take a video as they're exploring it. So you can then come back to that video, re-watch it and say, okay, this is what's happened. Because maybe in that experience you needed to be more hands-on. But it would be up to you. When you plan your experience, you would have an idea of how you would be

**[3:02:51] Participant:** HUM.

**[3:03:05] Emma Cross:** assessing and observing or checklisting or what it might be and you would have that in your plan and come prepared for whatever means that might be. As somebody put it in the chat earlier, Professor Murcia said yesterday, sometimes the best plan is to throw the plan away. You might find the same with your assessment as well. You might come all prepared to do a checklist and you go, oh my goodness, these children are not getting any of these ticks. So you might throw the checklist away and then do an observation and say, okay, so what is it that they can do? So I would just be prepared to give it a go, but both of those examples are perfect. You could do either of them.

**[3:03:44] Participant:** Okay, thank you, Miss Emma.

**[3:03:46] Emma Cross:** Welcome, Evie.

**[3:03:52] Participant:** Okay, thank you. Let's continue to add the question. Based on the holistic education, I asked you about the assessment. It should be we interpret part by part of the student ability. For example, the art progress,

**[3:04:04] Emma Cross:** Mhm.

**[3:04:11] Participant:** Our science progress, or we interpret whole of the student knowledge schema. Thank you.

**[3:04:19] Emma Cross:** Yeah, definitely. I think you're not always going to be able to integrate all of their knowledge. Sometimes it'll just be that you have a focus area or something like that. But I also do want to stress here that, let me just cheque which module it is, but you have a whole module that focuses on assessment. So don't feel like you need to walk away from here. fully understanding assessment. That's module 4. So today we're just looking at the holistic integration. Please don't overthink assessment yet. We're not there yet. Almost, not yet. I might just leave it there for now because I'm mindful of the time. What we are going to do now is spend the next 20 minutes, so until, again, I don't know what the time is where you are. Where I am, it's 4.20pm. So at 4.40pm, we'll come back. So in 20 minutes, and we'll have a chat. But what I want you to do is plan just one experience using these six questions to guide what your thinking is, okay? And when we come back, I might get one really brave person to share their plan with me, or with the group, I should say. So feel free to turn your microphones off, turn your cameras off, whatever you need to do. But we're going to spend the next 20 minutes planning this lesson. Just a reminder, we've got about 5 minutes here, everyone. Okay, that's time. I am going to hand over to [name], who was the first to pop in the chat that she was really keen to share her plan. I'm sorry, I can see everyone's hands popping up now. You're all obviously really excited to share. We'll see how long [name] takes to share her plan. If we have time, we'll do one more as well. Take it away.

**[3:23:49] Participant:** Well, thank you, Emma, for the opportunity. The first, I will, I would like to plan a... For my own context, yeah, I would like to plan a forest firefighting role play activity. This, because this is reality in our in my district now in Central Kalimantan Indonesia, where we face the...

**[3:24:00] Emma Cross:** Mm-hmm.

**[3:24:17] Participant:** So many haze, the weather in Kalimantan for four months. So there are forest and land fires. First, I know the children in central Kalimantan are familiar with forest. and here are so many forests, and sometimes experience has caused by forest fire and this thing every year, always there's the forest fires, and my learning intention, the curriculum intention,

**[3:24:43] Emma Cross:** Mhm.

**[3:24:55] Participant:** is to help children, my children in the school, understand the importance of protecting forests while developing their communication and problem solving, teamwork, and in for I am a and. Environmental awareness, so I will so for this I will create a create a mini forest. You see, you see maybe a cardboard, a cardboard trees and paper flames, like pretend this is a forest.

**[3:25:13] Emma Cross:** HUM. Yeah.

**[3:25:33] Participant:** and the children will pretend to be firefighters and they will walk together using water spray with bottles maybe to put on the pretend fire and to rescue forest animals. During the activity, I will observe how my children communicate,

**[3:25:42] Emma Cross:** Mhm.

**[3:25:52] Participant:** Corporate and follow instruction and solve the problem how to how to to lost the fire in the with the water, and after that.

**[3:26:02] Emma Cross:** Mhm. Yeah.

**[3:26:07] Participant:** From this experience, the children can learn about nature, environment protection. Empathy, firstly, yes, and responsibility.

**[3:26:19] Emma Cross:** Mhm.

**[3:26:20] Participant:** And what next? For the next steps, I would like to invite my children to plant the trees and create poster about protecting our forests in order this condition, this what name, this problem that every year. Always there in Kalimantan, the fire, forest fire. I believe this activity is meaningful because it connects children's learning with real situation in our environment.

**[3:26:56] Emma Cross:** Mm.

**[3:26:58] Participant:** And... Ohh, what else? Maybe that's for me, Emma. Thank you, yes.

**[3:27:04] Emma Cross:** And also, and through the experience that you've planned for as well, the children have the opportunity to learn by doing, by trying new things, which is also really meaningful for young children.

**[3:27:10] Participant:** Hello, you. Yes.

**[3:27:16] Emma Cross:** Thank you, [name].

**[3:27:17] Participant:** Yes, thank you. You're welcome.

**[3:27:20] Emma Cross:** Lydia, I can see you're the first with the hand raised.

**[3:27:25] Participant:** Yeah, thank you, Emma. I would like to choose number three and then I will connect that to the experience that I plan to make. Why I do, why I choose this one? Because I think this activity, number three, it allows teachers to plan meaningful, playful,

**[3:27:31] Emma Cross:** Okay. Okay. HUM. Yeah.

**[3:28:00] Participant:** Mostly, because our school is close to a farm. a farm and also a university that has a farm. So the activities that I'm planning would be about plants.

**[3:28:09] Emma Cross:** Okay.

**[3:28:12] Participant:** HUM.

**[3:28:17] Participant:** would be about plants. So the Learning and Teaching Experience might be about plants. So the children will become the little garden explorer. Saying here, I will bring the children to have the direct experience to explore how the plants, how many plants that do they have there and also

**[3:28:19] Emma Cross:** Okay. Yeah.

**[3:28:36] Participant:** build their knowledge about the plants in which hydroponic plants that have different media in which the plants can be planted, not just on the soil, but also can be on another materials also. So in here, they will explore different parts of a plant, such as while visiting,

**[3:28:43] Emma Cross:** HUM.

**[3:28:59] Participant:** the place, the children will also have the experience to observe different parts of a plant, such as they know which one is the stem, which one is the leaves and which one is the flowers. So in here, through their experience in the environment, they use their five senses.

**[3:29:11] Emma Cross:** OK.

**[3:29:18] Participant:** to explore and learn about the plants in the farm. By doing this, the children will develop curiosity, not just curiosity, but also they observe and yeah, touching the materials. They also observe and discover new ideas about the plant.

**[3:29:19] Emma Cross:** HUM. Okay.

**[3:29:38] Participant:** and then the planning experience might be, for example, at the beginning, the activity would be they explore the garden and observe different plants, like what I said, and then the second, the, what is it, the children, the teacher, the kids, yeah? They explore by touching the leaves, maybe smell the flowers, and then tell the teachers how it smells. And then also they will do some hands-on activities, like after returning back from the place to the school, they will like directly plant

**[3:29:58] Emma Cross:** HUM.

**[3:30:18] Participant:** Uh, seats like planting, doing planting activities and. Water them and regularly cheque how it grows. So this is the experience that I plan to do. And then in here, the teacher will build an open-ended question or inquiry experience there with the students while they're doing the activity.

**[3:30:28] Emma Cross:** Mhm. Okay.

**[3:30:44] Participant:** The teacher here act as the facilitator who facilitate the students with the media and also the questions to like trigger their knowledge about the plans that they planned. So the teacher can ask the questions like what can you

**[3:30:49] Emma Cross:** HUM.

**[3:31:03] Participant:** What can you see here? How does this leaf feel when you touch it when you visit the garden? Was the leaf rough or smooth? How was it look like? Is it big or small? So in here, what happens when we give the plant water and what happens if you don't water the plant?

**[3:31:21] Emma Cross:** Mhm.

**[3:31:24] Participant:** So in here, the teachers will like dig in, dig more to what the students experience or know about the plants. So in here, the children learn through experience. They also may demonstrate, which is they plant

**[3:31:31] Emma Cross:** HUM.

**[3:31:44] Participant:** The seats at school together with their friends, and then... There is an early scientific thinking. Yeah, when we like align this with a holistic teaching and learning experiences, with this one experience of learning, the teachers already help the students to have the skills of

**[3:31:57] Emma Cross:** Mhm.

**[3:32:09] Participant:** like what you mentioned before, literacy and science, arts, and also aligned with the domain child and child development, in which the students will learn about how they, the moral value, how to take care and look after the

**[3:32:22] Emma Cross:** Yeah.

**[3:32:30] Participant:** the plans like that. So one experience, one learning experience that teachers can take the students or help them to have another skills that help develop their holistic development in their preschool age.

**[3:32:31] Emma Cross:** Yeah. Definitely.

**[3:32:51] Participant:** Yeah, that's what I think. Thank you, Emma.

**[3:32:53] Emma Cross:** HUM. Thank you, Lydia. And actually, I did something quite similar with a group of

**[3:32:55] Participant:** Yeah.

**[3:33:02] Emma Cross:** They would have been about 5 year olds and we planted a garden at the school as well. And one thing that we did, and I know I said that I'm not a fan of worksheets, but this is an example of when it can be well done. It wasn't a worksheet as such, but we made work. books with the children and because of the way that when you plant a seed, it obviously takes time to grow and things like that. In their workbook, we had different things that they could do. So every, I think it was every week or maybe even every day, I can't remember now, there was a space for the children to document what they could observe. You know, in the garden, how tall had the plants grown? Could they measure how tall they were? How many had sprouted already? You know, were there any insects that were trying to eat the plants?

**[3:33:55] Participant:** Yeah.

**[3:34:01] Emma Cross:** all of these things, so they could actually write down their observations. So they developed their literacy skills because they're writing in English language, what they're seeing, what they're observing. They were also drawing pictures of what they could see, which is a really beautiful example of the art. Using things like measurement, measuring the plants, comparing them, which one is bigger, which one is smaller. mathematics right there. There are so many opportunities for that holistic integration, like you've said. And I think that's where it's not necessarily a worksheet, but it is a work sample is a really positive thing to come from that. I saw also in the chat when we were on our break, somebody asked a question a little while ago about It sounds like there's a lot of pressure from parents to have worksheets as examples of achievement from the children. What I will say on that is that obviously we are looking and you will again, don't get too scared now because module 4 is the assessment. But those assessments also form ways of demonstrating children's learning and capabilities to the parents. So when we do those observations, those learning stories, those checklists, those workbooks, those work samples, you know, their artworks, those things all come together and demonstrate what they can and what they can do and what they know and understand. So we don't have to do a worksheet to be able to achieve that with the parents. And I think that example, Lydia, that you've just provided is a really beautiful one of how we can holistically integrate curriculum and also provide work samples. We're going to leave it there. We are running out of time. I'm so sorry. Before we finish up for today, what I want you to think about and maybe just pop in the chat and again, I'll try and get to two people with their hands up. What is 1 change you could make to your current planning process that you feel would help strengthen holistic learning in your environment. I'm going to start with [name]. Sorry, you've got your hand up, so I'm hoping you're ready.

**[3:36:13] Participant:** Thank you for this opportunity. Emma, so I am very nervous.

**[3:36:19] Emma Cross:** That's okay. I don't bite.

**[3:36:20] Participant:** Okay, I will try. Okay. I I answered for the before the next the slide before for the yes, yes, and raise raise hand for the slide before. I'm so sorry.

**[3:36:33] Emma Cross:** Oh sorry, do you want some time to think? That's okay. Do you want to add to this one or no?

**[3:36:42] Participant:** Can I get it? Yes, just before slide before. OK, in my kindergarten and my students at four to five years old, the student with the curious explorers.

**[3:36:56] Emma Cross:** Mhm.

**[3:37:02] Participant:** very active, very active. Okay, so the activity is about the ways the curriculum intention is to foster children informal awareness. Creative expression, student agency, communication skill, and by sorting ways. We're sorting ways in our school.

**[3:37:27] Emma Cross:** Mhm.

**[3:37:28] Participant:** and then transform a recycle material, make something art. And then we are doing with setting up the recycling station in our classroom. We label it bin for paper, maybe plastic and cardboard. I will provide a set

**[3:37:46] Emma Cross:** HUM.

**[3:37:55] Participant:** On this part. Uh, and recycle packaging, uh, the children using scissor and uh. Many material. So, uh... I noticed not noticed and hurt children and get. I noticed them carefully sorting plastic bottles from paper box and working collaborate collaborate.

**[3:38:27] Emma Cross:** Mhm.

**[3:38:34] Participant:** Collaboratively to tape cardboard piece together.

**[3:38:35] Emma Cross:** HUM.

**[3:38:39] Participant:** I heard I heard them saying this, this plastic bottle can be one children say this plastic bottle can be a rocket ship and look at look at this is my robot maybe. Every children make a... Something different.

**[3:39:04] Emma Cross:** Yeah.

**[3:39:04] Participant:** And so, uh... What does this tell me about this learning? I saw that the children are developing system and habits and fine motor control, maybe, and then...

**[3:39:19] Emma Cross:** Mhm.

**[3:39:22] Participant:** They're in imagine, imagine there. Imaginative, I think they they imagine their thinking and confident in public speaking when when when they're so up there they create they create a thing. And then what to do next? Maybe we plan about some exhibition, the mini exhibition in our school maybe. I think, I'm so sorry, it's just enough. Thank you.

**[3:39:55] Emma Cross:** Mhm. That's lovely. Yeah, definitely. And I can see again how that can be quite a large project and you can follow the interests of the children. I'm even thinking that you could tie some more literacy things in there as another follow-up and using their creations to retell different stories or perhaps to make their own story. you know, about a robot that flies in a rocket ship to the moon and that they could use the creations to role play that. There's so many really beautiful things that can come from that, so thank you for sharing.

**[3:40:36] Participant:** Thank you.

**[3:40:38] Emma Cross:** I will just get one person to talk about what is a change that they can make to their planning process. I can see, is it Emma? Emma was first with your hand up. Did you want to have a go?

**[3:40:57] Participant:** Okay, do you hear my voices?

**[3:41:00] Emma Cross:** I can. Thank you.

**[3:41:01] Participant:** Okay, I want to try to answer this slide. What is 1 chance you could make to your planning process that would strengthen healthy learning? One chance I will make is to start my planning. from children's interest and observation, not only from worksheet. I will observe first, then plan the environment with real material so children can learn vertically through play. Like [name]. Thank you.

**[3:41:42] Emma Cross:** That's very exciting and I really hope it all goes well for you. And like I said earlier, there's nothing wrong with going slowly as well. These changes can take time and a slow change is really positive as well. So I am so hopeful that all of you are able to see these changes that you're hoping for in your practise and in your teams. And yeah, I really look forward to, I hear that there's potential that you could be coming to Australia and to visit us next year. So I hope that that's true and that you can come and fill us in on all of the amazing things that you've been doing. Sadly, we are almost at the end of today's session. I have two final things to leave with you. The first one is that planning and assessment do belong together. It's all part of how we know what to plan for and whether or not our plans have been successful. So today obviously is module 2. We looked at holistic integration of curriculum. And next week, you will look at child-centered learning, or not next, I don't know when, but your next session, your next module is child-centered learning. And the following one from that is assessment. So all of this comes together and builds the bigger picture of teaching young children. And the last thing I want to leave with you is that the plan is not the end point. It is a hypothesis about learning that becomes more useful when we observe what children can actually do. And so this is very much, again, what Karen said yesterday. Sometimes the best plan is to throw the plan away. It's not the end point. It's just the start. So thank you all so much for your time and your patience today and being really engaged and enthusiastic. It makes my job a lot easier. So thank you so much. It was a real pleasure getting to know you and your context and hearing how passionate you all are for early childhood education. So thank you so much and a big clap to all of you for coming along today. Thank you.

**[3:43:47] Participant:** Thank you, Emma.

**[3:43:48] Participant:** Thank you. Thank you, Miss Emma. Miss Emma, before we finish this. Thank you. See you soon. Thank you, Emma.

**[3:43:48] Participant:** Thank you, Emma. Thank you. Take a picture. Thank you.

**[3:43:50] Participant:** Thank you, Miss Emma. Can we? Thank you. Thank you, Miss Emma. Tamara. Can we take a picture together?

**[3:43:53] Emma Cross:** Have a wonderful evening.

**[3:43:56] Participant:** Thank you. See you.

**[3:43:58] Participant:** Can we take a picture together? Thank you.

**[3:44:00] Participant:** Thank you, Miss Emma.

**[3:44:01] Participant:** OK, it's that.

**[3:44:03] Participant:** Can we take a picture together, Miss Emma?

**[3:44:04] Participant:** Thank you, thank you so much.

**[3:44:05] Emma Cross:** Yeah, definitely. Yep.

**[3:44:06] Participant:** Take a picture.

**[3:44:07] Participant:** Yes. Okay.

**[3:44:10] Participant:** Yeah.

**[3:44:10] Participant:** Okay.

**[3:44:12] Emma Cross:** How do we do this?

**[3:44:12] Participant:** We are.

**[3:44:12] Participant:** Thank you, Miss.

**[3:44:14] Participant:** Oh.

**[3:44:14] Participant:** Can you turn your PowerPoint and I will screen?

**[3:44:17] Participant:** Yeah, I think you have to turn off your screen first so you can see. HUM.

**[3:44:20] Participant:** Yes, girlfriend, yes.

**[3:44:21] Emma Cross:** Ah, of course.

**[3:44:22] Participant:** Murcia.

**[3:44:23] Emma Cross:** Sorry, I can't see on my side that it's on. How's that?

**[3:44:25] Participant:** HUM.

**[3:44:27] Participant:** Yeah.

**[3:44:28] Participant:** You're beautiful. Yes.

**[3:44:30] Participant:** Yeah.

**[3:44:30] Participant:** No charges.

**[3:44:31] Participant:** It's good.

**[3:44:31] Participant:** Me too.

**[3:44:32] Participant:** Like. Okay, I will take a...

**[3:44:35] Participant:** Yeah.

**[3:44:35] Participant:** Mine.

**[3:44:37] Participant:** One, two, three. Again?

**[3:44:45] Participant:** Can you take all?

**[3:44:46] Participant:** Yes. Give you a big smile, and that's one, two, three.

**[3:44:48] Participant:** Okay.

**[3:44:48] Participant:** Of course, me.

**[3:44:51] Participant:** Be.

**[3:44:56] Participant:** Okay, thank you, Miss Emma. Okay, thank you so much.

**[3:44:58] Emma Cross:** Thank you all so much, and.

**[3:44:59] Participant:** Thank you. Bye.

[3:44:59] Emma Cross: Can I take a quick, I'll take a quick selfie. Hang on, hang on. Why would they?

[3:45:04] Participant: Nice.

[3:45:04] Participant: OK, sure. Ready. Always ready for the picture.

[3:45:05] Emma Cross: You ready?

[3:45:06] Participant: Ready.

[3:45:07] Participant: Yes, I'm ready.

[3:45:07] Participant: Yes, yeah.

[3:45:10] Participant: No.

[3:45:12] Participant: Yeah.

[3:45:13] Participant: Ohh, my God.

[3:45:13] Emma Cross: Thank you all so much, and I hope I see you next year.

[3:45:15] Participant: Okay.

[3:45:16] Participant: No, I'm big oven for that. I mean, I mean, I mean. Like we did you.

[3:45:17] Participant: Okay, I hope so. I mean, we will just see you. PhD at Curtin University.

[3:45:17] Participant: Yay, I will, I will play.

[3:45:19] Participant: Hello, you.

[3:45:24] Participant: Yes, yes, so.

[3:45:24] Participant: Thank you, Miss Emma. Have a nice day.

[3:45:25] Participant: Thank you.

[3:45:26] Emma Cross: Thank you everyone. Have a great evening. Bye. Bye. Bye bye.

[3:45:27] Participant: Have a nice day.

[3:45:28] Participant: Have a nice day. Bye. Good day, everybody. Have a nice day, Miss Emma.

[3:45:29] Participant: Have a nice day. Good evening. Bye. A great day, bye, bye, see you.

[3:45:35] Participant: Bye-bye.

[3:45:38] Participant: Come on, let's see.

[3:45:43] Participant: At all.

[3:45:49] Participant: Kate.

[3:45:50] Participant: Yeah, yeah.

[3:45:51] Participant: Messenger.

[3:45:57] Participant: Okay.

[3:46:00] Participant: Oh.

[3:46:05] Participant: I do.

[3:46:11] Participant: This is in your burgers.

[3:46:11] Participant: Oh.

[3:46:20] Participant: Take that.

[3:46:21] Participant: Yeah.

**[3:46:24] Participant:** I want it to go by.

**[3:46:24] Participant:** HUM.

**[3:46:28] Participant:** Oh yeah.

**[3:46:29] Participant:** HUM.

**[3:46:33] Participant:** HUM.

**[3:46:37] Participant:** Owen. So, I mean, we depend, yeah, we we can people and offender.

**[3:46:43] Participant:** HUM.

**[3:46:47] Participant:** Yeah, November, yeah.

**[3:46:47] Participant:** Yeah.

**[3:46:47] Participant:** HUM.

**[3:46:48] Participant:** November Rain.

**[3:46:49] Participant:** November, November.

**[3:46:50] Participant:** Okay. Okay. Yeah, I mean.

**[3:46:54] Participant:** I mean, yeah, yeah, I mean.

**[3:46:54] Participant:** Man.

**[3:46:57] Participant:** HUM.

**[3:47:00] Participant:** HUM. Thank you.

**[3:47:07] Participant:** Yeah, yeah.

**[3:47:10] Participant:** HUM. Don't know why.

**[3:47:18] Participant:** Ohh yeah, so this year, but I'm not there.

**[3:47:21] Participant:** Yes, the best idea.

**[3:47:21] Participant:** Yeah.

**[3:47:22] Participant:** I.

**[3:47:23] Participant:** Yeah.

**[3:47:24] Participant:** You under cut it, do you have ready to cut, yeah, and then take Australia?

**[3:47:24] Participant:** HUM.

**[3:47:24] Participant:** No.

**[3:47:30] Participant:** Yeah, Australia.

**[3:47:30] Participant:** Yeah.

**[3:47:34] Participant:** I forgot, Sally.

**[3:47:40] Participant:** Transit.

**[3:47:42] Participant:** Yeah.

**[3:47:42] Participant:** Yeah, OK, OK, but how would you go?

**[3:47:46] Participant:** Oh.

**[3:47:46] Participant:** Yeah.

**[3:47:48] Participant:** HUM.

**[3:47:48] Participant:** Okay, speed boot, yeah.

**[3:47:51] Participant:** Yeah, I speak good.

**[3:47:52] Participant:** HUM.

**[3:47:54] Participant:** Say to do new.

**[3:47:57] Participant:** Yeah.

**[3:47:59] Participant:** Yeah.

**[3:48:00] Participant:** Ito kandipata.

**[3:48:01] Participant:** What?

**[3:48:03] Participant:** HUM. When that, when that.

**[3:48:07] Participant:** Yeah.

**[3:48:07] Participant:** Rally?

**[3:48:08] Participant:** Okay.

**[3:48:09] Participant:** HUM.

**[3:48:09] Participant:** This is.

**[3:48:12] Participant:** Everything and see, everything and see.

**[3:48:12] Participant:** HUM.

**[3:48:14] Participant:** Yeah.

**[3:48:15] Participant:** Yeah, yeah.

**[3:48:15] Participant:** It with the onion bread.

**[3:48:15] Participant:** HUM.

**[3:48:16] Participant:** Yeah, I love.

**[3:48:18] Participant:** I need.

**[3:48:18] Participant:** Some of them.

**[3:48:19] Participant:** How could you go?

**[3:48:22] Participant:** Start closing.

**[3:48:23] Participant:** So, more and more.

**[3:48:23] Participant:** HUM. Yeah, but.

**[3:48:27] Participant:** Yeah, I would.

**[3:48:27] Participant:** Yeah.

**[3:48:29] Participant:** Not Indonesia, but can you sing a?

**[3:48:31] Participant:** HUM.

**[3:48:31] Participant:** Yeah.

**[3:48:32] Participant:** Dulu, Dulu, Dua, Dua, Dua, Dua.

**[3:48:38] Participant:** HUM. HUM.

**[3:48:40] Participant:** ED.

**[3:48:40] Participant:** Oh. HUM.

**[3:48:55] Participant:** Monash University.

**[3:48:56] Participant:** HUM, yeah.

**[3:48:57] Participant:** Yeah. Oh, it took, oh, yeah, it took one, yeah.

**[3:49:01] Participant:** See. Yeah.

**[3:49:09] Participant:** HUM.

**[3:49:10] Participant:** Efficiency.

**[3:49:12] Participant:** Gracia, the surprise, the surprise, I mean.

**[3:49:13] Participant:** No, I said. I mean, I mean.

**[3:49:14] Participant:** Pizza.

**[3:49:15] Participant:** Serious.

**[3:49:17] Participant:** Who do we?

**[3:49:20] Participant:** Since I do.

**[3:49:22] Participant:** As.

**[3:49:23] Participant:** Yes.

**[3:49:24] Participant:** Yabador.

**[3:49:25] Participant:** Take off.

**[3:49:27] Participant:** Yeah, yeah.

**[3:49:28] Participant:** Okay. HUM.

**[3:49:32] Participant:** HUM.

**[3:49:34] Participant:** Call Sally.

**[3:49:34] Participant:** But the I mean, I mean.

**[3:49:35] Participant:** I mean, I mean, I mean.

**[3:49:35] Participant:** I was grabbing.

**[3:49:36] Participant:** I'm in, I'm in. AM. Yeah.

**[3:49:45] Participant:** Yeah.

**[3:49:47] Participant:** That's bad. Ohh yeah, well, you sorry, uh huh. How many, how many did you get?

**[3:50:03] Participant:** Yeah.

**[3:50:04] Participant:** Oh, yeah. Okay.

**[3:50:09] Participant:** Yeah, I hope they pull out. HUM.

**[3:50:10] Participant:** Hey, Sylvia. Summer.

**[3:50:18] Participant:** And yeah.

**[3:50:19] Participant:** But I think.

**[3:50:19] Participant:** Yeah, okay, bye. See you.

**[3:50:20] Participant:** Okay.

**[3:50:23] Participant:** But remember, see.

**[3:50:23] Participant:** OK, bye. See you, Sonja.
